The Visual Effects Arsenal Bill Byrne 2012-11-12 Build your VFX arsenal with quick-access, step-by-step instruction on how to create today's hottest digital VFX shots. This essential toolkit provides techniques for creating effects seen in movies such as 300, Spiderman 3, Predator and others, with lessons on how-to: * splatter blood or digitally lop someone's arm off * create a scene with actors running from an explosion * create the "twin effect" (same actor, same location, 2 performances) * produce space-ship dog fights Organized in a 'cookbook' style, this allows you to reference a certain effect in the index and immediately access concise instructions to create that effect. Techniques are demonstrated in each of the most popular software tools- After Effects, Final Cut Studio, Shake, Photoshop, and Combustion are all covered. Brilliant, 4-color presentation provides inspiration and stimulating visual guidance to the lessons presented, while the companion DVD contains project media files enabling you to put concepts learned into immediate practice.

BUILDING A SPORTSCAR EXTERIOR TO CLASS-A SURFACING STANDARDS TUTORIAL Serdar

Hakan DÜZGÖREN PREFACE INTRODUCTION TO 'CLASS A SURFACING' 'Class A surfacing' is to produce mathematical surfaces to the most exacting standard. Once completed the 'A Class surface' is the final output of styling design. These surfaces are the 'Master' for making the tools that produces the product itself. 'Class A' surfacing is one of the most complex and tedious 3D computer modeling tasks you can do. 'Class A' surface development occurs in the final phase of a project, when constraints are much tighter to adhere to. Modeling under these conditions is very hard without adoption of certain 'surface basics' rules. 3D computer modeling is still based on the knowledge and skill set of the individual user. Therefore productivity and surface quality is user dependent. The surfacing task can begin from the scan of a physical model, as in this tutorial, but it can also start from 2D sketch or verbal input. In most cases it is the continuation of a concept 3D digital model. Most of the time you will also need to be aware of and include flanges, draft angles, tool split lines and other engineering constraints In the tutorial these are not included. To include them would put even more constraints on the modeling/surfacing itself. This tutorial demonstrates only one small part of 'class A' surfacing, but a very important element of creating good quality surfaces When you are starting a project or a part, always take some time to think how you will build this before you start. It is not a good idea to rush in the beginning of a project. To be successful and to achieve that right quality in the time given you need a 'strategy'. Without this you can find yourself in a corner from which you can never escape a dead end. These points below are, in my opinion, the most important, basic rules to succeed. □□ It is very important to have a strategy on methodology, surface layout and surface construction. □□ Always try to build the surfaces to allow easy modification. □□ Keep the surfaces as simple as possible. □□ Always try to build to an intersection. By following these basic rules you have come a long way to succeeding in your modeling. Good luck.

Learning Autodesk VIZ Sham Tickoo 2004 This text is designed as a hands-on supplement to classroom instruction. Major aspects of the software Autodesk VIZ, Release 4, are presented in step-by-step tutorials. These tutorials allow the reader to learn by doing. The procedures outlined in the text are reinforced by printed screen images. The text consists of 17 tutorials. At the end of each tutorial is a Self-Evaluation Test. This measuring device is used to check student progress and understanding of the software and 3D modeling concepts. Five projects are included at the end of the book. These projects are longer and more complex than the other tutorials.
