**Environmental Chemistry: Asian Lessons** V.N. Bashkin 2007-05-08 At present environmental chemistry is becoming an increasingly popular subject in both under graduate and graduated education in the whole World and especially in all Asian countries. Different courses in ecology, chemistry, environmental science, public health, geography, biology, and environmental engineering all include this subject in their curriculum. Many textbooks have appeared in recent years aiming to fulfill these requirements; however, most of these books operate mainly with examples from developed countries of Europe, USA and Canada. Taking into account the geographic boundaries of environmental pollution that is especially pronounced in Asia and the specific peculiarities of pollution in developing countries, this textbook is supposed to close the gap by providing regionally oriented knowledge in basic and applied environmental chemistry.

**Macmillan/McGraw-Hill Math: Teacher ed., v. 2** 2004

*Teaching Science* Jenny Frost 2014-02-25 First published in 1995. This teaching book is packed with practical ideas and advice for the beginning science teacher. It is based on three simple principles regarding teaching methods: a principle of variety; a principle of careful and appropriate choice; and a principle of skilful and carefully prepared implementation. Through a wide range of examples, the authors discuss in richly illustrated detail what these principles involve in practice. All the examples are real ones taken from recent classroom experience, made more vivid by a large collection of photographs documenting the steps and phases involved in each kind of approach.

*Confronting Climate Change* Irving M. Mintzer 1992-06-11 Confronting Climate Change is a guide to the risks, dilemmas, and opportunities of the emerging political era, in which the impacts of a global warming could affect all regional, public and even individual decisions. Written by a renowned group of scientists, political analysts and economists, all with direct experience in climate change related deliberations, Confronting Climate Change is a survey of the best available answers to three vital questions: What do we know so far about the foreseeable dangers of climate change? How reliable is our knowledge? What are the most rewarding ways to respond? The book begins by exploring the key linkages and feedbacks that connect the risks of rapid climate change to other important environmental, economic and political problems of our time. Recognizing persistent uncertainties in the scientific understanding of climate change, the book draws attention to those areas of research which may reveal surprises which could

change the sense of political urgency surrounding the climate problem - as did the discovery of the Antarctic ozone hole. It explores the geological record of climate change over the Earth's history, seeking a better understanding of how the climate has changed rapidly in countries while minimizing the long-term environmental damages which otherwise will result from continuing the current patterns of energy supply and use. The book is written to cross discipline boundaries, so that policy makers, economists, scientists, risk assessors, environmentalists and development advocates may understand each other's concerns. It shows how the international debate on managing the risks of rapid climate change may be re-shaped for the benefit of people in every nation on the planet.
