Evaluating Collaboration Networks in Higher Education Research Denise Leite 2016-11-23 This book identifies key factors that drive the development and improvement of higher education research in emerging and advanced economies. In an increasingly interconnected world, knowledge production supported by strong research is a channel for the development of nations. The authors of this book argue that in order to drive knowledge production, leaders must strive to improve their understanding of how global research networks interact with one another, especially from the perspective of internationalization. This book is a useful resource for higher education researchers interested in knowledge production and dissemination as well as academic leaders and practitioners, students, and leaders interested in public administration policies and management.

The Collaborative Era in Science Caroline S. Wagner 2018-10-25 In recent years a global network of science has emerged as a result of thousands of individual scientists seeking to collaborate with colleagues around the world, creating a network which rises above national systems. The globalization of science is part of the underlying shift in knowledge creation generally: the collaborative era in science. Over the past decade, the growth in the amount of knowledge and the speed at which it is available has created a fundamental shift—where data, information, and knowledge were once scarce resources, they are now abundantly available. Collaboration, openness, customer- or problem-focused research and development, altruism, and reciprocity are notable features of abundance, and they create challenges that economists have not yet studied. This book defines the collaborative era, describes how it came to be, reveals its internal dynamics, and demonstrates how real-world practitioners are changing to take advantage of it. Most importantly, the book lays out a guide for policymakers and entrepreneurs as they shift perspectives to take advantage of the collaborative era in order to create social and economic welfare.

Agricultural Research Networks as Development Tools D. G. Faris 1991 An Agricultural Research Network (ARNET) constitui uma rede de cientistas e instituicoes com interesse comum de trabalho e pesquisa agricola.

Collaborative Knowledge in Scientific Research Networks Diviaco, Paolo 2014-10-31 Research inherently requires collaborative efforts between individuals, databases, and institutions. However, the systems that enable such interpersonal cooperation must be properly suited in facilitating such efforts to avoid impeding productivity. Collaborative Knowledge in Scientific Research Networks addresses the various systems in place for collaborative e-research and how these practices serve to enhance the quality of research across disciplines. Covering new networks available through social media as well as traditional methods such as mailing lists and forums, this publication considers various scientific disciplines and their individual needs. Theorists of collaborative scientific work, technology developers, researchers, and funding agency officials will find this book valuable in exploring and understanding the process of scientific collaboration.

Regional Economies as Knowledge Laboratories Philip N. Cooke 2004 Today, the study of regions is central to academic analysis and policy deliberation on how to respond to the rise of the knowledge economy.

Regional Economies as Knowledge Laboratories illustrates how newer types of regional analysis - utilising scientometrics, knowledge services measures and university networks, and concepts such as knowledge life cycles, experimental knowledge creation, and knowledge ethics - are leading to a perception that regional economies increasingly resemble knowledge laboratories. In addition to these measures and concepts, the book features case studies and assessments of policies implemented to facilitate regional engagement with the knowledge economy, and a critique of 'knowledge economy' as ideology. The importance of maintaining a balanced perspective in assessing the depth and reach of the role of knowledge in the market economy is also examined. Aiming to contribute to the better understanding of theories and practices associated with knowledge regions, this book will appeal to a wide ranging audience, including regional and industrial economists, innovation scientists, academics and practitioners with an interest in knowledge and management organisation, regional scientists, economic geographers, and economic sociologists.

Encyclopedia of Networked and Virtual Organizations Goran Putnik 2008 "This book documents the most relevant contributions to the introduction of networked, dynamic, agile, and virtual organizational models; definitions; taxonomies; opportunities; and reference models and architectures. It creates a repository of the main developments regarding the virtual organization, compiling definitions, characteristics, comparisons, advantages, practices, enabling technologies, and best practices"--Provided by publisher.

Networking Research, Development and Innovation in Arab Countries United Nations. Economic and Social Commission for Western Asia 2005 "Innovation is central to the development of successful economies. Less-favored countries and regions are often those that lack the capacity to innovate and, consequently, that lack the ability to improve their positions in today's competitive global market. Capacity to innovate helps countries and regional groupings achieve advantageous positions in key industrial and service sectors. Research, development and innovation (RDI) networks designed to promote innovative inputs can secure competencies in areas of expertise unattainable by individual countries and institutions. Furthermore, RDI networks play a significant role in securing a critical mass of both human and financial resources, particularly given the increased importance of multidisciplinary approaches and demand for higher resource levels linked to tangible impacts. Increasing sophistication of the research and development (R and D) enterprise is reflected in the cost of equipment and consumables, which renders R and D activities an expensive business whose costs are better shared among as many concerned partners as possible."--Publisher's description.

Knowledge Creation, Diffusion, and Use in Innovation Networks and Knowledge Clusters Elias G. Carayannis 2006 In the 21st century, intangible resources such as knowledge and social capital have become as necessary to the modern economy as coal, diamonds, and oil were to the past. This shift from product-focused to service-focused economies necessitates a drastic re-thinking of the ways in which we support the mission and business of economic development on a global, regional, and national scale. In order to effect and sustain a positive change, innovation and knowledge networks need to be connected to every aspect of life, from the private and domestic, to the corporate and the global. This book integrates a wide variety of perspectives and treatises on mutually adaptive and complementary processes of knowledge generation, diffusion, and transfer within organizations and industry, addressing both the what and how to questions of knowledge management in a conceptual as well as an applied manner. It should be of strong interest to science and technology policy makers, research and development managers, business decision makers, and students of innovation and knowledge dynamics alike.
