Investigation of Exposure Based Pedestrian Accident Areas 1988

Previous FHWA research on pedestrian exposure identified four problem areas as promising candidates for accident reduction: intersections without marked pedestrian crosswalks, major arterial streets, local streets, and locations lacking sidewalks or pedestrian pathways. This report describes the results of a project undertaken to examine those four problem areas. The objectives of the project were to: evaluate past research on pedestrian crosswalk markings and develop guidance for when and what type of crosswalk markings should be provided; investigate traffic engineering improvements for major arterial streets to increase pedestrian safety; investigate traffic engineering improvements for local streets to increase pedestrian safety; and examine existing guidance/warrants for the provision of pedestrian pathways and sidewalks and prepare revised guidance/warrants.

ASA S3/SC1.4 TR-2014 Sound Exposure Guidelines for Fishes and Sea Turtles: A Technical Report prepared by ANSI-Accredited Standards Committee S3/SC1 and registered with ANSI Arthur N. Popper

2014-07-07 This Technical Report presents the outcome of a Working Group that was established to determine broadly applicable sound

exposure guidelines for fishes and sea turtles. After consideration of the diversity of fish and sea turtles, guidelines were developed for broad groups of animals, defined by the way they detect sound. Different sound sources were considered in terms of their acoustic characteristics and appropriate metrics defined for measurement of the received levels. The resultant sound exposure guidelines are presented in a set of tables. In some cases numerical guidelines are provided, expressed in appropriate metrics. When there were insufficient data to support numerical values, the relative likelihood of effects occurring was evaluated, although the actual likelihood of effects depends on the received level. These sound exposure guidelines, which are based on the best scientific information at the time of writing, should be treated as interim. The expectation is that with more research the guidelines can be refined and more cells in the tables completed. Recommendations are put forward defining the research requirements of highest priority for extending these interim exposure guidelines.
