Learning: How Technology Can Enable School Improvement is about how to manage technology for learning at the district and school levels. It provides an overview of the components of learning technology; these include student devices, networking, software productivity toolkits, electronic curricula and resources, and data system infrastructure. And, it discusses how we can manage our technology efforts more effectively to help our students attain the benefits of this technology. The book concludes with case studies of how this is being done at pioneering districts. We are now at a tipping point in implementing learning technology on a larger scale. This is happening very quickly! Historically, learning technology was driven by a strategy of “technology integration,” where we called on individual teachers to each determine how to use technology in their classes and make changes in their own ways of working. But to successfully implement technology on the scale we need

requires top-down as well as bottom-up efforts. Managing the New Tools in K-12 Teaching and Learning focuses on how districts and schools can now use technology to bring about the big improvements in learning we are all striving for.

control every aspect of the schooling process in North America, there has been surprisingly little research on the impact of textbook content on students. The contributors of this volume and its partner (The New Politics of the Textbook: Problematizing the Portrayal of Marginalized Groups in Textbooks) guide educators, school administrators, academics, and other concerned citizens to unpack the political, social, and cultural influences inherent in the textbooks of core content areas such as math, science, English, and social science. They urge readers to reconsider the role textbooks play in the creation of students' political, social, and moral development and in perpetuating asymmetrical social and economic relationships, where social actors are bestowed unearned privileges and entitlements based upon their race, gender, sexuality, class, religion and linguistic background. Finally, they suggest ways to resist the hegemony of those texts through critical analyses, critical questioning, and critical

pedagogies.
