*Database aesthetics [electronic resource]* Viktorija Vesna Bulajić 2007

Database Aesthetics examines the database as cultural and aesthetic form, explaining how artists have participated in network culture by creating data art. The essays in this collection look at how an aesthetic emerges when artists use the vast amounts of available information as their medium. Here, the ways information is ordered and organized become artistic choices, and artists have an essential role in influencing and critiquing the digitization of daily life. *Gaming Utopia* Claudia Costa Pederson 2021-04-06 In *Gaming Utopia: Ludic Worlds in Art, Design, and Media*, Claudia Costa Pederson analyzes modernist avant-garde and contemporary video games to challenge the idea that gaming is an exclusively white, heterosexual, male, corporatized leisure activity and reenvisioning it as a catalyst for social change. By looking at over fifty projects that together span a century and the world, Pederson explores the capacity for sociopolitical commentary in virtual and digital realms and highlights contributions to the history of gaming by women, queer, and transnational artists. The result is a critical tool for understanding video games as imaginative forms of living that offer alternatives to our current reality. With an interdisciplinary

approach, Gaming Utopia emphasizes how game design, creation, and play can become political forms of social protest and examines the ways that games as art open doors to a more just and peaceful world.
