Urban Street Design Guide National Association of City Transportation Officials 2013-10-01 The NACTO Urban Street Design Guide shows how streets of every size can be reimagined and reoriented to prioritize safe driving and transit, biking, walking, and public activity. Unlike older, more conservative engineering manuals, this design guide emphasizes the core principle that

urban streets are public places and have a larger role to play in communities than solely being conduits for traffic. The well-illustrated guide offers blueprints of street design from multiple perspectives, from the bird's eye view to granular details. Case studies from around the country clearly show how to implement best practices, as well as provide guidance for customizing design applications to a city's unique needs. Urban Street Design Guide outlines five goals and tenets of world-class street design:

- Streets are public spaces. Streets play a much larger role in the public life of cities and communities than just thoroughfares for traffic.
- Great streets are great for business. Well-designed streets generate higher revenues for businesses and higher values for homeowners.
- Design for

safety. Traffic engineers can and should design streets where people walking, parking, shopping, bicycling, working, and driving can cross paths safely. • Streets can be changed. Transportation engineers can work flexibly within the building envelope of a street. Many city streets were created in a different era and need to be reconfigured to meet new needs. • Act now! Implement projects quickly using temporary materials to help inform public decision making. Elaborating on these fundamental principles, the guide offers substantive direction for cities seeking to improve street design to create more inclusive, multi-modal urban environments. It is an exceptional resource for redesigning streets to serve the needs of 21st century cities, whose residents and visitors demand a variety of transportation options, safer streets, and vibrant community life.

Urban Bikeway Design Guide, Third Edition
National Association of City Transportation

Officials 2025-01-14 Over a decade ago, the first edition of the NACTO Urban Bikeway Design Guide sparked a design revolution in cities. City streets are now understood as key elements in confronting the intertwined safety, equity, and climate crises in North America. The completely revised and updated third edition of the NACTO Urban Bikeway Design Guide sets a new standard for street design in North America. Developed for cities, by cities, the new guide is more than a permission slip for better street design--it's a prescription for safe, connected, equitable bike networks. It captures lessons learned and emerging practices to set a new bar for the design of city streets. The NACTO Urban Bikeway Design Guide, Third Edition, will help city leaders and street designers meet the needs of our time. New topics address critical gaps in existing guidance for planning and project development. Contextual guidance for bikeway design encompasses the needs of a wider swath of potential riders, across genders, ages, races,

ethnicities, incomes, and abilities. The guide offers substantive guidance for safe intersection design, with a focus on conflict reduction. It is a blueprint for implementing safe, connected, and equitable bike networks. Every transportation professional, from design to maintenance and from field staff to executives, needs a copy for their daily work. Praise for the second edition “NACTO's Urban Bikeway Design Guide gives American planners and designers the tools they need to make cycling accessible to more people.” —Janette Sadik-Khan, former New York City Transportation Commissioner “This is an extraordinary piece of work that's long overdue.” —Ray LaHood, former United States Secretary of Transportation “The guide will serve as an essential blueprint for safe, active, multi-modal streets.” —Gabe Klein, former Chicago Transportation Commissioner “A Must-read... Landscape architects, planners, and city officials should find this guide invaluable. Anyone who advocates for increasing bicycle infrastructure in

our cities will find many useful tools for implementing best practice infrastructure.”

[Design Guidelines in American Cities](#) John Punter 1999-01-01 This book is a study of design initiatives and policies in five US West Coast cities -- Seattle (including Bellevue), Portland, San Francisco, Irvine and San Diego--all of which have had particularly interesting urban design experience of relevance to practice in Britain and other countries. Although these cities are not a representative sample of all American design practice, they provide a rich vein of ideas about recent policy development and current initiatives which will stimulate thought about the formulation of effective design controls. The presentation of substantial extracts from key documents that underpin design controls in the five cities will be of interest, inspiration and practical use to academics and practitioners who want to know more about American practice and who want to contribute to improvements in the

standards and quality of urban design policies and design control. The opening chapter provides a national context and a comparative framework for the study, with a focus on international perspectives, American planning systems and the development of criteria for comparison and evaluation. The five subsequent chapters take each city in turn, briefly reviewing the salient characteristics of each one before presenting an account of how planning and design policy have evolved in the last twenty-five years; key features of the contemporary systems of design control are highlighted and a summary evaluation is made. The focus in the case studies is on how policy and guidance have been formulated, structured and presented in the various documents that make up the policy framework, how the process of control operates, and how both respond to the criticisms commonly made of design and control. This final chapter draws general conclusions about the experience of the studied cities of wider

relevance to American design review practice, but which are of interest to those engaged in design review and policy formulation everywhere.

Planning and Urban Design Standards American Planning Association 2006-02-03 From the publishers of Architectural Graphic Standards, this book, created under the auspices of The American Planning Association, is the most comprehensive reference book on urban planning, design, and development available today. Contributions from more than two hundred renowned professionals provide rules of thumb and best practices for mitigating such environmental impacts as noise, traffic, aesthetics, preservation of green space and wildlife, water quality, and more. You get in-depth information on the tools and techniques used to achieve planning and design outcomes, including economic analysis, mapping, visualization, legal foundations, and real estate developments. Thousands of illustrations,

examples of custom work by today's leading planners, and insider information make this work the new standard in the field. Order your copy today.

Tools for Working with Guidelines Jean Vanderdonckt 2000-10-04 This volume contains the papers presented at the International Workshop on Tools for Working with Guidelines, (TFWWG 2000), held in Biarritz, France, in October 2000. It is the final outcome of the International Special Interest Group on Tools for Working with Guidelines. Human-computer interaction guidelines have been recognized as a uniquely relevant source for improving the

usability of user interfaces for interactive systems. The range of interactive techniques exploited by these interactive systems is rapidly expanding to include multimodal user interfaces, virtual reality systems, highly interactive web-based applications, and three-dimensional user interfaces. Therefore, the scope of guidelines' sources is rapidly expanding as well, and so are the tools that should support users who employ guidelines to ensure some form of usability.

Tools For Working With Guidelines (TFWWG) covers not only software tools that designers, developers, and human factors experts can use to manage multiple types of guidelines, but also looks at techniques addressing organizational, sociological, and technological issues.

the use and impact of WHO guidelines World Health Organization 2025-10-22 The Product Design and Impact Unit of the Department of Quality Assurance, Norms and Standards, WHO, in collaboration with Monash University, conducted an in-person workshop in Geneva, Switzerland, in September 2023. The workshop was attended by 14 participants (12 in person and 2 online) who are experts in the areas of accessibility, clarity and translation in WHO publishing. The aims of the workshop were (i) to share and discuss actions already used at WHO in the three design principles, design for accessibility, design for clarity and design for translation; (ii) to evaluate the usefulness of and barriers to use of selected prototype design tools in using those principles in practice; and (iii) to collect further feedback on how the tools could be improved. This report summarizes the outcomes of the workshop and describes the usefulness of the prototype design tools and barriers to uptake of the prototype design tools.

Strategic Issues Facing Transportation Steven W. Popper 2013 "TRB's National Cooperative Highway Research Program (NCHRP) Report 750, Volume 3: Strategic Issues Facing Transportation, Volume 3: Expediting Future Technologies for Enhancing Transportation System Performance presents the systematic technology reconnaissance, evaluation, and adoption methodology (STREAM). STREAM is a process that transportation agencies can use to identify, assess, shape, and adopt new and

emerging technologies to help achieve long-term system performance objectives. The process reflects relevant trends in technologies and their applications and is designed to help transportation agencies anticipate, adapt to, and shape the future. NCHRP Report 750, Volume 3 is the third in a series of reports being produced by NCHRP Project 20-83: Long-Range Strategic Issues Facing the Transportation Industry. Major trends affecting the future of the United States and the world will dramatically reshape transportation priorities and needs. The American Association of State Highway and Transportation Officials (AASHTO) established the NCHRP Project 20-83 research series to examine global and domestic long-range strategic issues and their implications for state departments of transportation (DOTs); AASHTO's aim for the research series is to help prepare the DOTs for the challenges and benefits created by these trends." -- publisher's description
