Science Bulletin Brigham Young University 1965  
*Doing Science* Neal A. Glasgow 1996-08-23 Offers new views and strategies to enliven the teaching of science by incorporating the investigative aspects of the subject. Bound to provide invaluable help in solving a very serious national problem. William J. Lennarz, Professor and Chairman Dept. of Biochemistry and Cell Biology State University of New York at Stony Brook Provides science teaches with innovative ways to involve students in working on dynamic, real-world problems and projects. This problem-based, student-centered approach to "doing science" focuses on life science learning and includes lessons from biology, chemistry, and physics. This holistic method has been incorporated into the national standards for science education. Includes practical

examples on how to: \* Utilize the natural curiosity, concern, and creativity of students to turn them into active participants in instruction, instead of passive recipients \* Design and develop problem and activity scenarios, and assess and evaluate the end results \* Teach students where and how to collect and analyze data in order to find the solutions to questions and problems \* Recruit and incorporate community mentors into your students' projects Addresses issues of liability and includes sample projects, policies, and release and permission forms. The author provides all the tools you need to turn life sciences into a "living" science.

Essential Foundations of Economics Robin Bade 2004

Essential Foundations of Economics was developed on the premise that economics is a core competency for the responsible citizen and a foundation tool for every type

of career. Bade/Parkin package is designed to encourage learning by doing. Each chapter concentrates on a manageable number of core concepts that are called out in the beginning of chapter Checklist. Students know what they're expected to learn and are given the chance to apply those lessons to real-world problems. Practice is the cornerstone of the innovative Bade/Parkin approach. A full page Checkpoint containing a Practice Problem with solution and a parallel Exercise immediately follows each main idea. Checkpoints serve as stopping points and encourage students to practice using a concept before moving on. Different learning styles need different learning tools, and Bade/Parkin's extensive and tightly integrated web environment puts students in the driver's seat and allows them to use technology in the way that suits them best.
