Handbook Assisted and Automated Driving Hermann Winner 2026-03-19 This open access book explains in detail systems and technologies for assisted and automated driving. It also provides an overview of the limitations of such systems concerning development processes and test tools. This description covers today's advanced driver assistance systems with environment perception in passenger cars, commercial vehicles, and motorcycles. This includes functional principles as well as embodiments of the components required for this purpose, such as sensors, actuators, mechatronic subsystems, and actuating elements. Additionally, data fusion concepts, environment representations, and user-friendly designs of the human-machine interface between the assistance system and driver are presented. New priorities are also presented concerning the development of automated driving. Although automated driving is based on the technology of advanced driver assistance systems, removing humans from the responsibility of driving induces entirely new challenges that also go beyond series technology. The variety of necessary innovative approaches is presented in example applications. The content Fundamentals of Advanced Driver Assistance System Development - Virtual Development and Test Environments for ADAS - Test Methods - Sensors for ADAS - Data Fusion and Environment Representation - Digital Infrastructure - Actuation for ADAS - Human-Machine-Interfaces for ADAS - ADAS on Guidance- and Navigation Level - Automated Driving The target groups Automotive development and application engineers Students of automotive-electrics, -electronics, -mechatronics Students of mechanical engineering/automotive technology Students of electronics/ informatics/ information technology The Editors Prof. Dr. rer. nat. Competition Law, Regulation and SMEs in the Asia-Pacific Michael T Schaper 2017-03-09 Small and medium-sized enterprises (SMEs) account for more than 90 per cent of all businesses in the Asia-Pacific region - an area which is rapidly updating its competition laws and regulations to encourage greater

entrepreneurship and open, dynamic economies. Yet SMEs are almost invisible when those competition policies and laws are developed and enforced. SMEs are often quite different businesses than large, multinational corporations, but their nature, significance and characteristics are often overlooked. This book seeks to rectify the relative neglect in research and policy discussions on the role of the SME sector in competition policy and law. Drawing on contributions from a wide range of competition regulators, lawyers, academics, consultants and advisers to the SME sector, it addresses such important issues as: perceptions and views of small businesses about competition law; regulator engagement and education of the SME sector; the link between competition law and economic growth; franchising, SMEs and competition law; issues in enforcing competition law against SMEs; the role of Chinese family firms; trade, professional and industry associations; country case studies from Vietnam, Singapore, Indonesia, Malaysia, China, South Korea, Hong Kong SAR, Japan and the Pacific Islands.
