**DSmT-Based Fusion Strategy for Human
Activity Recognition in Body Sensor
Networks** Yilin Dong Multi-sensor fusion
strategies have been widely applied in Human
Activity Recognition (HAR) in Body Sensor
Networks (BSNs). However, the sensory data
collected by BSNs systems are often uncertain

or even incomplete. Thus, designing a robust
and intelligent sensor fusion strategy is
necessary for highquality activity recognition. In
this paper, Dezert-Smarandache Theory (DSmT)
is used to develop a novel sensor fusion strategy
for HAR in BSNs, which can effectively improve
the accuracy of recognition. Specifically, in the
training stage, the Kernel Density Estimation
(KDE) based models are first built and then
precisely selected for each specific activity
according to the proposed discriminative
functions.

ECAI 2020 Giuseppe De Giacomo 2020-09-15

This book presents the proceedings of the 24th

European Conference on Artificial Intelligence (ECAI 2020), held in Santiago de Compostela, Spain, from 29 August to 8 September 2020. The conference was postponed from June, and much of it conducted online due to the COVID-19 restrictions. The conference is one of the principal occasions for researchers and practitioners of AI to meet and discuss the latest trends and challenges in all fields of AI and to demonstrate innovative applications and uses of advanced AI technology. The book also includes the proceedings of the 10th Conference on Prestigious Applications of Artificial Intelligence (PAIS 2020) held at the same time. A record number of more than 1,700 submissions was received for ECAI 2020, of which 1,443 were reviewed. Of these, 361 full-papers and 36 highlight papers were accepted (an acceptance rate of 25% for full-papers and 45% for highlight papers). The book is divided into three sections: ECAI full papers; ECAI highlight papers; and PAIS papers. The topics of these papers cover all

Routing and Switching curriculum. The course introduces the architecture, structure, functions, components, and models of the Internet and computer networks. The principles of IP addressing and fundamentals of Ethernet concepts, media, and operations are introduced to provide a foundation for the curriculum. By the end of the course, you will be able to build simple LANs, perform basic configurations for routers and switches, and implement IP addressing schemes. The Companion Guide is designed as a portable desk reference to use anytime, anywhere to reinforce the material from the course and organize your time. The book's features help you focus on important concepts to succeed in this course: Chapter Objectives -Review core concepts by answering the focus questions listed at the beginning of each chapter. Key Terms -Refer to the lists of networking vocabulary introduced and highlighted in context in each chapter. Glossary -Consult the comprehensive Glossary with more

than 195 terms. Summary of Activities and Labs -Maximize your study time with this complete list of all associated practice exercises at the end of each chapter. Check Your Understanding - Evaluate your readiness with the end-of-chapter questions that match the style of questions you see in the online course quizzes. The answer key explains each answer. covers common applications and communication protocols for WSNs. Next, the authors review basic mathematical models such as Voroni diagrams and Delaunay triangulations. Sensor principles, hardware structure, and medium access protocols are examined. Security challenges ranging from defense strategies to network robustness are explored, along with quality of service measures. Finally, this book discusses recent developments and future directions in WSN platforms. Each chapter concludes with classroom-tested exercises that reinforce key concepts. This book is suitable for researchers and for practitioners in industry. Advanced-level students in electrical engineering and computer science will also find the content helpful as a textbook or reference.
