**Simply Visual Basic 2008** Paul J. Deitel 2009  
For introductory courses in Visual Basic Programming, offered in departments of Information Technology, Computer Science or Business. Merging the concept of a lab manual with that of a conventional textbook, the Deitels have crafted an innovative approach that enables students to learn programming while having a mentor-like book by their side. This best-seller blends the Deitel(tm) signature Live-Code(tm) Approach with their Application-Driven(tm) methodology. Students learn programming and Visual Basic by working through a set of applications. Each tutorial builds upon previously learned concepts while learning new ones, An abundance of self assessment exercises are available at the end of

most chapters to reinforce key ideas. This approach makes it possible to cover a wealth of programming constructs within the Visual Basic 2008 environment. Key topics include Language Integrated Query (LINQ), Visual Programming, Framework Class Library (FCL), Controls (Buttons, TextBoxes, ListBoxes, Timers, ComboBoxes, RadioButtons, Menus, Dialogs), Event Handling, Debugger, Algorithms, Control Structures, Methods, Random-Number Generation, Arrays, Classes, Objects, Collections, Mouse & Keyboard Event Handling, Strings, Files, Database, Graphics, Multimedia, GUI Design and Web applications. Deitel accomplishes this by making highly technical topics as simple as possible. The Third Edition is fully updated for Visual Studio 2008, Visual Basic 2008 and .NET 3.5.

### **The New Walford Guide to Reference**

**Resources** Ray Lester 2005 The New Walford highlights the best resources to use when undertaking a search for accurate and relevant information, saving you precious time and effort. For those looking for a selective and evaluative

reference resource that really delivers on its promise, look no further. In addition to print sources, The New Walford naturally covers an extensive range of e-reference sources such as digital databanks, digital reference services, electronic journal collections, meta-search engines, networked information services, open archives, resource discovery services and websites of premier organizations in both the public and private sectors. But rather than supplying a list of all available known resources as a web search engine might, The New Walford subject specialists have carefully selected and evaluated available resources to provide a definitive list of the most appropriate and useful. With an emphasis on quality and sustainability, the subject specialists have been careful to assess the differing ways that information is framed and communicated in different subject areas. As a result the resource evaluations in each subject area are prefaced by an introductory overview of the structure of the
