Technology's Challenges and Solutions in K-16 Education during a Worldwide Pandemic Li-Ting Chen 2023-10-21 The book not only provides empirical evidence of challenges faced by educators and learners during COVID-19 but also gives fresh insights on how educators and education administrators may act proactively to prepare for an emergency situation. The school year of 2020 was unlike any other. Globally, the outbreak of COVID-19 impacted learners and educators in all levels. Many learners were forced to rapidly transit from face-to-face to online learning, while educators were required to hastily convert in-person to online delivery mode. What challenges did the educators and learners face and what were the possible solutions? How can technology as a tool be used to enhance teaching and maximize student learning when an emergency occurs? This book addresses these two questions. With contributions from international scholars, the book begins by providing the context of COVID-19 and a brief introduction of five empirical studies included in the book as well as suggesting directions for future research. Subsequent chapters represent a variety of research approaches and perspectives from learners, educators, and parents of learners, but all share a common focus on challenges faced by educators and learners as well as

opportunities to use technology as a tool to maximize student learning during a worldwide pandemic. *Technology's Challenges and Solutions in K-16 Education during a Worldwide Pandemic* will be a key resource for educators, academics, researchers, and students of Education, Instructional Design and Technology, Educational Leadership and Policy, Educational Research, Educational Technology, Research Methods and Sociology, STEM Education, and Curriculum and Instruction. The chapters included in this book were originally published as a special issue of *Computers in the Schools*.

International Perspectives on the Teaching and Learning of Geometry in Secondary Schools

Patricio Herbst 2018-04-27 This book presents current perspectives on theoretical and empirical issues related to the teaching and learning of geometry at secondary schools. It contains chapters contributing to three main areas. A first set of chapters examines mathematical, epistemological, and curricular perspectives. A second set of chapters presents studies on geometry instruction and teacher knowledge, and a third set of chapters offers studies on geometry thinking and learning. Specific research topics addressed also include teaching practice, learning trajectories, learning difficulties, technological resources, instructional design, assessments, textbook analyses, and teacher education in geometry. Geometry remains an essential and critical topic in school mathematics. As they learn geometry, students develop essential mathematical thinking and visualization skills and learn a language that helps them relate to and interact with the physical world. Geometry has traditionally been included as a subject of study in secondary mathematics curricula, but it has also featured as a resource in out-of-school problem solving, and has been connected to various human activities such as sports, games, and artwork. Furthermore, geometry often plays a role in teacher preparation, undergraduate mathematics, and at the workplace. New technologies, including dynamic geometry software, computer-assisted design software, and geometric positioning systems, have provided more resources for teachers to design environments and tasks in which students can learn and use geometry. In this context, research on the teaching and learning of geometry will continue to be a key element on the research agendas of mathematics educators, as researchers continue to look for ways to enhance student learning and to understand student thinking and teachers' decision making.
