introduces readers to an
advanced combinatorial testing
approach and its application in
the cloud environment. Based
on test algebra and fault
location analysis, the proposed
combinatorial testing method
can support experiments with
250 components (with $2 * (250)$
combinations), and can detect
the fault location based on the
testing results. This function
can efficiently decrease the
size of candidate testing sets
and therefore increase testing
efficiency. The proposed
solution's effectiveness in the
cloud environment is
demonstrated using a range of
experiments.
