This is an idea book. It was designed for you, the literature teacher, as a time-saver that brings together key ideas, background information, and suggestions for teaching the novel successfully. Choose from the suggestions in the book to suit your style; adapt and expand on activities as they suit your students. Above all, this book is meant to be a tool to assist you in intensifying your students' involvement with the text and with the way literature helps to make sense of our world.

Teaching on Solid Ground

Thomas M. McCann

2019-01-09 To be successful, teachers of English in grades 6-12 need more than basic content knowledge and classroom management skills. They need a deep understanding of the goals and principles of teaching literature, writing, oral discourse, and language in order to make sound instructional decisions. This engaging book explores the pedagogical foundations of the discipline and gives novice and future teachers specific guidance for creating effective, interesting learning experiences. The authors consider such questions as what makes a literary text worth studying, what students gain from literary analysis, how to make writing meaningful, and how to weave listening and speaking into every class meeting. Professional learning and course use are facilitated by end-of-chapter reflection questions, text boxes, and

appendices showcasing exemplary learning activities.

Genetics and Animal Breeding: Biological and genetic foundations of animal breeding Janusz Maciejowski 1982

In this two-volume work, the authors discuss the basic biological processes - reproduction, growth and ageing - since it is by having a precise knowledge of these processes that the breeder is able to control and regulate their courses, assuming that the optimum environmental conditions are satisfied. Information on ancestry, habitat and characteristics connected with the identification of domestic animals is also presented. Particular emphasis is placed on the increase of output through changes in the genetic composition of a utilized group of animals and in this context the book discusses the formation of the genetic structure, interdependence

between inheritance and environment, and the three stages in the actual work of breedings, i.e. appraisal of the breeding value and usable worth of animals, selection, and application of correct methods of association.

Responding to the tremendous interest in their previous volume (Virtual Field Trips, Libraries Unlimited, 1997) and to specific requests from users, Cooper and Cooper bring you a host of new and exciting sites for educational field trips into cyberspace. The new trips and topics reflect current curricular requirements and goals such as business, women's history,

conflict resolution, and multiculturalism. Trips for physically and emotionally challenged students and for those who wish to get to know them better have been added and there are more sites for physical education, health and safety, rural, and architectural trips. Like the first volume, this book is organized by subject. Together the two books can provide hours of opportunities for educators and students to travel throughout the world and back and forth in time to study natural phenomena and participate in cultural and scientific activities with practicing
