## Perspectives on Business

Modelling Anders G. Nilsson  
2012-12-06 How can established models and methods be employed for the understanding and change of organisations? One of the key issues presented in this book is bridging the communication gap between business leaders and IT experts in companies and public services. This is facilitated by combining different models for the development of corporate strategies, business processes and information support. The leading idea behind this book is to present different perspectives on business modelling, based on established theories and practical experiences. The book offers advanced knowledge and relevant information on the key issues in business modelling for today`s organisations.

Business Information Systems,  
Concepts and Examples. ISBN:  
0952795639 Year: 1998 This  
book aims to fill a gap in the  
current business and tutorial  
literature. It has been designed  
for the business individual, for  
the student and the computer  
professional who need a  
detailed overview of business  
information systems. It  
explores computing in general,  
the structured development of  
systems using processes and  
data analysis; object oriented  
and other methods. It includes  
the project planning and  
testing procedures for the  
Millennium thread.

Asprey 2003-01-01 Portals  
present unique strategic  
challenges in the academic  
environment. Their  
conceptualization and design  
requires the input of campus  
constituents who seldom  
interact and whose interests  
are often opposite. The  
implementation of a portal  
requires a coordination of  
applications and databases  
controlled by different campus  
units at a level that may never  
before have been attempted at  
the institution. Building a  
portal is as much about  
constructing intra-campus  
bridges as it is about user  
interfaces and content.  
Designing Portals:  
Opportunities and Challenges  
discusses the current status of  
portals in higher education by  
providing insight into the role  
portals play in an institution's  
business and educational  
strategy, by taking the reader

through the processes of conceptualization, design, and implementation of the portals (in different stages of development) at major universities and by offering insight from three producers of portal software systems in use at institutions of higher learning and elsewhere.
