Accelerating K-8 Math

Instruction Nicki Newton
2023 "This book discusses
Acceleration in Math.

Acceleration is a paradigm shift. It is moving away from schlepping students through the fields of everything they don't know and targeting the interventions so that it serves as a footbridge into the right now. Acceleration helps all students to be in the "know." It prepares them for upcoming lessons so that they can actively participate with the peers exploring grade level standards. Acceleration is a way of saying, "Everybody is invited to this party."

Throughout this book you will learn ways to plan, implement and evaluate accelerated lessons in math"--

Classics in Mathematics

Education Research Thomas P.
Carpenter 2004 This collection

of articles, which have had a major influence on recent research and together provide a recent historical perspective, focuses on themes surrounding evolving conceptions of learning and teaching. In the last three decades, research in mathematics education has undergone dramatic changes. The articles selected for this volume offer perspectives on the development of these themes, some of which include the process-product paradigm, gender and mathematics, problem solving, students' thinking and the role of cultural practises in the acquisition of mathematical concepts and procedures. Resources in Education 1992 **Handbook of International Research in Mathematics Education** Lyn D. English 2002-03 This state-of-the-art Handbook brings together important mathematics education research that makes a difference in both theory and

practice--research that: anticipates problems and needed knowledge before they become impediments to progress; interprets future-oriented problems into researchable issues; presents the implications of research and theory development in forms that are useful to practitioners and policymakers; and facilitates the development of research communities to focus on neglected priorities or strategic opportunities. The volume represents a genuine attempt by contributors from around the world to advance the discipline, rather than simply review what has been done and what exists. The Handbook was developed in response to a number of major global catalysts for change, including the impact of national and international mathematics comparative assessment studies; the social, cultural, economic, and political influences on mathematics education and research; the influence of progressively sophisticated and available technology; and the

increasing globalization of mathematics education and research. From these catalysts have emerged specific priority themes and issues for mathematics education research in the 21st century. Three key themes were identified for attention in this volume: life-long democratic access to powerful mathematical ideas; advances in research methodologies; and influences of advanced technologies. Each of these themes is examined in terms of learners, teachers, and learning contexts, with theory development as an important component of all these aspects. Dynamic and forward looking, the Handbook of International Research in Mathematics Education is distinguished by its focus on new and emerging theoretical models, perspectives, and research methodologies; its uniformly high standard of scholarship; and its emphasis on the international nature of mathematics education research. It is an essential volume for all researchers,

professionals, and students interested in mathematics education research in particular and, more generally, in international developments and future directions in the broad field of educational research.

Perspectives on the Teaching of Mathematics

Rheta Norma Pollock
 Rubenstein 2004 Teaching is a complex, ongoing endeavor that involves a myriad of decisions. NCTM's sixty-sixth yearbook is organised around three aspects of teaching: foundations for teaching, the enactment of teaching and the support of teaching nurtured in preservice education and strengthened throughout a teacher's career. The accompanying professional development guidebook, edited by George W. Bright, contains activities that illustrate and extend some of the ideas in the yearbook in order to further teachers' growth and development in understanding and implementing effective mathematics instruction.

Mathematics in the Early Years

Juanita V. Copley 1999 Noting that young children are capable of surprisingly complex forms of mathematical thinking and learning, this book presents a collection of articles depicting children discovering mathematical ideas, teachers fostering students' informal mathematical knowledge, adults asking questions and listening to answers, and researchers examining children's mathematical thinking. The chapters are: (1) "Why Do We Teach Young Children So Little Mathematics? Some Historical Considerations" (Balfanz); (2) "Children's Ways of Knowing: Lessons from Cognitive Development Research" (Sophian); (3) "The Sociology of Day Care" (McDill and Natriello); (4) "Cultural Aspects of Young Children's Mathematics Knowledge" (Guberman); (5) "Ready To Learn: Developing Young Children's Mathematical Powers" (Greenes); (6) "The Development of Informal Counting, Number, and Arithmetic Skills and Concepts"

Issues of Curriculum Reform in Science, Mathematics and Higher Order Thinking Across the Disciplines Ronald D.

Anderson 1994 This literature review is the first phase of an extensive review of curriculum reform in science, mathematics and higher order thinking across the disciplines. The first of eight sections is an executive summary addressing the major themes of the document. The second section deals with several general issues of curricular reform concerning teaching and learning. The next three sections address separate aspects of school curriculum: mathematics, science, and higher order thinking across the disciplines. Each subject and section explores the historical context from which curriculum reform in this area emerges, characteristics of curriculum reform, required changes in curriculum, and

current projects under way. The sixth section covers the process of curriculum reform. It is a multifaceted process that varies substantially from one time and setting to another. The next section addresses the context for reform in this country with attention given to national, state, and regional efforts at curriculum reform. The final section addresses the implications for the Curriculum Reform Project, for which this review of literature provided a foundation. A bibliography and a list of other Studies of Education Reform Program reports and a bibliography of 251 references are included (JPT)

Teachers of Mathematics 1966
Beliefs About Text and

Instruction With Text Ruth Garner 2019-06-06 Every day in classrooms, teachers and students think about and with text. Their beliefs about what text is, who created it, and how to evaluate it are an influence, often a profoundly important one, on how they use text. This book brings together research on epistemology, belief systems, teacher beliefs, and text -- research that is usually presented separately, and in different disciplines. The editors illustrate what a cross-disciplinary body of work looks like, what varied insights are possible, and when the central concerns are beliefs and text. Written by respected researchers in the fields of psychology and education, the chapters are clustered thematically into three sections: * childrens' and adults' beliefs about text. * beliefs about what should be taught and how particular content should be taught and assessed in classrooms. * commentary on knowing versus

believing, on the literatures that inform this body of work, and on belief systems. The first to address this important topic in a single volume, this book provides an essential synthesis of current research in an active area of inquiry. The chapters are pieces framed in a time and place with particular intentions -- one of those intentions is that they separately and as a whole stimulate discussion about beliefs and text.

Reflective Teaching Kenneth

M. Zeichner 2013-05-13 This

volume outlines the assumptions and beliefs that distinguish the concept of the reflective teacher from the view of the teacher as passive and a mere technician -- a view that teacher education programs and schools have historically promoted. The authors demonstrate how various conceptions of reflective teaching differ from

one another. They believe that it is only through teachers' reflections on their own teaching that they become more skilled, more capable, and in general better teachers. This is the first volume in the "Reflective Teaching and the Social Conditions of Schooling" series. The major goal of both this book and of all of the volumes to follow in this series is to help teachers explore and define their own positions with regard to the topics and issues at hand within the context of the aims of education in a democratic society.

Lesson Study Research and Practice in Mathematics Education

Lynn C. Hart
2011-01-11 Lesson study is a professional development process that teachers engage in to systematically examine their practice, with the goal of becoming more effective. Originating in Japan, lesson study has gained significant momentum in the mathematics

education community in recent years. As a process for professional development, lesson study became highly visible when it was proposed as a means of supporting the common practice of promoting better teaching by disseminating documents like standards, benchmarks and nationally validated curricula. While the body of knowledge about lesson study is growing, it remains somewhat elusive and composed of discrete research endeavors. As a new research area there is no coherent knowledge base yet. This book will contribute to the field bringing the work of researchers and practitioners together to create a resource for extant work. This book describes several aspects of Lesson Study, amongst others: it gives an historical overview of the concept, it addresses issues related to learning and teaching mathematics, it looks at the role of the teacher in the process. The last two sections of the book look at how lesson Study can be used with preservice mathematics
