Kathleen A. Ireland 2018-01-15
Visualizing Human Biology is a visual exploration of the major concepts of biology using the human body as the context. Students are engaged in scientific exploration and critical thinking in this product specially designed for non-science majors. Topics covered include an overview of human anatomy and physiology, nutrition, immunity and disease, cancer biology, and genetics. The aim of Visualizing Human Biology is a greater understanding, appreciation and working knowledge of biology as well as an enhanced

ability to make healthy choices and informed healthcare decisions.

Anatomy and Physiology Gary

A. Thibodeau 1987 This accurate and up-to-date introductory text on human form and function presents a large, complex body of scientific knowledge in an easily understood, conversational writing style. Focusing on concepts rather than just descriptions to help students unify information, the text uses a "big picture" theme of body function and explains the body's homeostatic regulation. Many practical features and hundreds of full-color illustrations enhance text content, and critical thinking learning opportunities are integrated throughout. New illustrations, revised Career Choices boxes in each unit, and current topics including anthrax and the human genome project have been added to this edition.
