**Detection and Remediation Technologies for Mines and Minelike Targets IX 2004 Conference Proceedings** 1995

**Antenna Fundamentals for Legacy Mobile Applications and Beyond** Issa Elfergani

2017-10-03 This book highlights technology trends and challenges that trace the evolution of antenna design, starting from 3rd generation phones and moving towards the latest release of LTE-A. The authors explore how the simple monopole and whip antenna from the GSM years have evolved towards what we have today, an antenna design that is compact, multi-band in nature and caters to multiple elements on the same patch to provide high throughput connectivity. The scope of the book targets a broad range of subjects, including the microstrip antenna, PIFA antenna, and the monopole antenna to be used for different applications over three different mobile generations. Beyond that, the authors take a step into the future and look at antenna requirements for 5G communications, which already has the 5G drive in place with prominent scenarios and use-cases emerging. They examine these, and put in place the challenges that lie ahead for antenna design, particularly in mm-Wave design. The book provides a reference for practicing engineers and under/post graduate students working in this field.

Electro-optical System Design, Simulation, Testing, and Training Richard M. Wasserman 2002 The past few years have seen an upsurge in the numbers of known Neolithic settlements in Ireland. Many of these sites have been excavated by archaeologists based in field units, but few are well-known to the wider archaeological community. The papers in this volume were presented at a conference held at Queen's University, Belfast in 2001, which provided a forum for a discussion of the new Neolithic material from Ireland in its wider geographical context. Although the bulk of the emerging Irish settlement evidence relates to substantial houses, many of these papers consider wider themes, including issues of

contact and communication along the sea routes and coastal margins of north-west Europe, questions of diversity and regional patterns of sedentism and mobility, and variations in regional food production strategies.

**Advanced Technology MMW, Radio, and Terahertz Telescopes** Thomas G. Phillips 1998

This collection of works on MMW, radio, and terahertz telescopes features 80 papers on topics within this field, including the laser micromachining of silicon as a method of manufacturing terahertz imaging arrays, and multipliers for terahertz local oscillators.

Advances in Communication, Devices and Networking Rabindranath Bera 2018-05-23 The book provides insights of International Conference in Communication, Devices and Networking (ICCDN 2017) organized by the Department of Electronics and Communication Engineering, Sikkim Manipal Institute of Technology, Sikkim, India during 3 - 4 June, 2017. The book discusses latest research papers presented by researchers, engineers, academicians and industry professionals. It also assists both novice and experienced scientists and developers, to explore newer scopes, collect new ideas and establish new cooperation between research groups and exchange ideas, information, techniques and applications in the field of electronics, communication, devices and networking.

**Quantum Computing Architecture and Hardware for Engineers** Hiu Yung Wong 2025-03-27 The purpose of this book is to teach quantum computing hardware from an engineer's perspective. Engineers play an important role in quantum computers. However, college and graduate engineering students usually do not have the required physics and mathematics training to understand how quantum computer hardware works. This book provides step-by-step guidance to connect engineers to the quantum world. Prepares readers with the essential mathematics and physics skills to understand and design quantum computers. Covers spin qubits and

superconducting qubits in a unified framework. Uses language accessible to readers with varying backgrounds and a step-by-step approach. Includes simulation codes and superconducting quantum chip design examples. Discusses step-by-step the physics, mathematics, and their connection to microwave electronics based on how they fulfill the five DiVincenzo's criteria.

**Development of Coherent Detector Technologies for Sub-Millimetre Wave Astronomy Observations** Boon Kok Tan

2015-09-15 The thesis describes the development of receiver technologies for sub-millimetre astronomy instruments, focusing on high performance coherent cryogenic detectors operating close to the superconductor gap frequency. The mixer chip which comprises the SIS devices, fed by a unilateral finline and matching planar circuits was fabricated on 15 micron silicon substrate using the recently developed Silicon-On-Insulator (SOI) technology. This offered broadband IF and RF performance, with fully integrated on-chip planar circuits resulting in an easily reproducible mixer chip and a simple mixer block. An important consequence of this design is that it can be extended to the supra-THz region and making the fabrication of multi-pixel heterodyne arrays feasible. The extension of the operation of major telescopes such as ALMA, APEX and the GLT from single pixel to large format arrays is the subject of extensive research at present time since it will allow fast mapping combined with high resolution of the submillimetre sky. The technology described in this thesis makes a major contribution to this effort.
