Theories in Adult Learning and Education

Paul Bélanger 2011-02-09 Adult Learning and Education The graduate student guide in adult education explores theories of adult learning and adult education participation. It provides a frame of reference for understanding the development of a rapidly evolving field and for enhancing knowledge and competencies in this professional domain. The publication is divided into two sections: a section on adult learning theories and a section on adult education participation theories. If Adult Learning and Education (ALE) is now a recognised professional field, the theoretical perspectives, underlying practices and policies draw on a variety of academic disciplines. Various theories of learning and of adult education participation shape the practice and the "engineering" of adult learning. In the first section, this study guide provides a review of the most important learning theories, including behaviourist, cognitive, and constructivist approaches, their modern development, as well as specific developments in adult education theory. The second section examines the psychological and sociological theoretical backgrounds of adult education participation in order to understand the factors at work in participation patterns along the adult life course and between different social contexts. Observing the relativity of social reproduction allows to identify the conditions and variables that need to be addressed in order

to alter prevailing trends.

SCM Studyguide to Christian Ethics Neil Messer 2006 This book is a wide-ranging introduction to Christian ethics that assumes no prior knowledge of the subject. It introduces a range of approaches to Christian moral reasoning and discusses numerous practical ethical issues. Throughout the book, ethical theory and practical ethics are integrated with one another, in order to show how each informs the other. Topics often neglected in Christian ethics are dealt with here, including Christian ethics and science and Christian ethics and pastoral care. Case studies and exercises give readers the opportunity to formulate their own responses to the moral issues discussed in the book, and to reflect on the sources of their own moral deliberation and action. Chapter bibliographies list print and web resources offering more detailed coverage of the topics introduced in the book.
