Organic Chemistry, Study Guide and

Solutions Manual T. W. Graham Solomons

2000 On the cover of this book is a Pacific yew

tree, found in the ancient forests of the Pacific

Northwest. The bark of the Pacific yew tree

produces Taxol, found to be a highly effective

drug against ovarian and breast cancer. Taxol

blocks mitosis during eukaryotic cell division.

The supply of Taxol from the Pacific yew tree is

vanishingly small, however. A single 100-year-

old tree provides only about one dose of the drug

(roughly 300 mg). For this reason, as well as the

spectacular molecular architecture of Taxol,

synthetic organic chemists fiercely undertook

efforts to synthesize it. Five total syntheses of

Taxol have thus far been reported. Now, a

combination of isolation of a related metabolite

from European yew needles, and synthesis of

Taxol from that intermediate, supply the clinical

demand. This case clearly demonstrates the

importance of synthesis and the use of organic

chemistry. It's just one of the many examples

used in the text that will spark the interest of

students and get them involved in the study of organic chemistry!
