Multiple View Geometry in

Computer Vision Richard
Hartley 2004-03-25 A basic
problem in computer vision is
to understand the structure of
a real world scene given
several images of it.

Techniques for solving this
problem are taken from
projective geometry and
photogrammetry. Here, the
authors cover the geometric
principles and their algebraic
representation in terms of
camera projection matrices,
the fundamental matrix and the
trifocal tensor. The theory and
methods of computation of
these entities are discussed
with real examples, as is their
use in the reconstruction of

scenes from multiple images.

The new edition features an
extended introduction covering
the key ideas in the book
(which itself has been updated
with additional examples and
appendices) and significant
new results which have
appeared since the first
edition. Comprehensive
background material is
provided, so readers familiar
with linear algebra and basic
numerical methods can
understand the projective
geometry and estimation
algorithms presented, and
implement the algorithms
directly from the book.
