Each chapter, with a few exceptions, consists of three parts: Part 1 is an overview of the theoretical background for the statistical and numerical methods; part 2 is a detailed description of the corresponding FORTRAN subroutines and of the numerical algorithms as they are implemented; part 3 presents the script of several examples concerning the use of ROBETH by means of the S-PLUS interface, including some examples of high level S functions

Psychological Statistics Using SPSS for Windows Robert C. Gardner 2001 This unique text on psychological statistics 1) provides the general rationale underlying many statistical procedures commonly used in psychology, 2) covers a wide range of topics--from the logic of statistical inference to multivariate analysis of variance, and 3) gives simple step-by-step instructions on how to access the relevant SPSS program. Each chapter presents a different procedure (e.g., t-tests, factor analysis, etc.), and briefly describes the basic concepts, purpose, and history necessary to understanding its strengths and limitations. A concrete example is used for each procedure, with the discussion of the SPSS output being directly linked to the underlying statistical model, so that readers can see how the interpretation of results follows from the nature of that procedure. Chapter topics include statistics, computers, and statistical packages; the t-test; single factor analysis of variance designs; completely randomized factorial designs; single factor repeated measures designs; split plot analysis of variance; chi-square analysis of frequency data; bivariate regression and correlation; multiple regression and multiple correlation; factor analysis; and multivariate analysis of variance. A reference guide for statisticians--to remind them of procedures learned earlier in their careers. *Laws and Regulations Relating to Automotive Repair Dealers, Licensed Official Stations, Better Auto Repair Program Facilities and Licensed Smog Check Stations* California 2002
