Questions answered include: • What changed on the command line in recent versions of macOS • What are the differences between the zsh shell and the bash shell • Which shell am I using, and how can I change my default shell • How do I quickly figure out the path to an item on my Mac • How can I customize my Terminal window so I can see man pages behind it • How can I make a shortcut to avoid retyping the same long command • Is there a trick for entering a long path quickly • What should I say when someone asks if I know how to use vi • How do I change my prompt to suit my mood or needs • What is Command Line Tools for Xcode • When it comes to package managers, which one should I use? Finally, to help you put it all together, the book showcases 67 real-world "recipes" that combine

commands to perform useful tasks, such as listing users who've logged in recently, manipulating graphics, using a separate FileVault password, creating and editing user accounts, figuring out why a disk won't eject, copying the source code of a webpage, determining which apps have open connections to the internet, flushing the DNS cache, finding out why a Mac won't sleep, sending an SMS message, and deleting stubborn items from the Trash.
