Climate Change 2022 - Impacts, Adaptation and Vulnerability

Intergovernmental Panel on Climate Change (IPCC) 2023-06-22 The Working Group II contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) provides a comprehensive assessment of the scientific literature relevant to climate change impacts, adaptation and vulnerability. The report recognizes the interactions of climate, ecosystems and biodiversity, and human societies, and integrates across the natural, ecological, social and economic sciences. It emphasizes how efforts in adaptation and in reducing greenhouse gas emissions can come together in a process called climate resilient development, which enables a liveable future for biodiversity and humankind. The IPCC is the leading body for assessing climate change science. IPCC reports are produced in comprehensive, objective and transparent ways, ensuring they reflect the full range of views in the scientific literature. Novel elements include focused topical assessments, and an atlas presenting observed climate change impacts and future risks from global to regional scales. Available as Open Access on Cambridge Core.

The Reproductive Body at Work Verena Namberger 2019-04-11 The transnational industry surrounding assisted reproductive technology and regenerative medicine is based on the unacknowledged labour of gamete providers, surrogates and research subjects, and benefits from low labour costs in 'enabling' sectors such as logistics and transport. This finding calls for a comprehensive analysis of how the contemporary intersection of neoliberal capitalism and the life sciences - in short, the bioeconomy - capitalises on the body and its (re)productive capacities. The Reproductive Body at Work uptakes this challenge as it explores the relations between value production, labour and the body in one particular realm of the global bioeconomy: the South African bioeconomy of 'egg donation'. It highlights different forms and dimensions of unacknowledged or precarious human labour that are constitutive for the procurement, brokering and circulation of oocytes as valuable resources. The analysis illustrates that the respective organisation of value and labour renegotiate what 'the' (re)productive body can do, which status and roles it is ascribed, which cultural and economic values it signifies and how it is experienced and enacted within a matrix of intersectional power relations. A theoretically profound contribution to the interdisciplinary debate on 'New materialism', The Reproductive Body at Work will appeal to students and researchers interested in fields such as gender studies, medical anthropology, cultural studies, sociology, political economy and science and technology studies.

Clinical Arrhythmology Antoni Bayés de Luna 2011-02-10 The study and management of abnormal heart rhythms is the core of Electrophysiology, but the successful identification and management of arrhythmias is important to a much wider range of physicians, from trainees in cardiology to general clinical cardiologists to practitioners in other areas of specialization, for example internists. This book is a thorough overview of clinical arrhythmology designed to help general clinical cardiologists and trainees in the fields of clinical cardiology and electrophysiology achieve the competency they need for clinical practice or for further specialization in the topics covered within the book.

Fundamentals of Neuroanesthesia Keith J. Ruskin 2013-10-25

Neurosurgical procedures are becoming more common and are taking place in the operating room and in interventional suites. Procedures that used to be performed only at major academic institutions are also being done in small community hospitals, and anesthesiologists in private practice are being asked to care for these patients. In many cases, treatment options are controversial or rapidly evolving. Close cooperation between the anesthesiologist and neurosurgeon is essential to achieve optimal outcomes and early recognition of any adverse events

so appropriate therapy can be implemented. Fundamentals of Neuroanesthesia is a comprehensive guide to neuroanesthesia that discusses neurophysiology, neuroanatomy, and neurosurgical procedures and offers practical approaches and solutions to administering neuroanesthesia and providing perioperative care for neurosurgical patients. Chapters emphasize clinical management of neurosurgical problems that may be encountered in community practice as well as major academic medical centers. Highlighted key points, figures, algorithms, and management procedures supplement the text. This book is a must-have volume for general anesthesiologists, anesthesiology fellows, and subspecialists.

Humanities for the Environment Joni Adamson 2016-11-10 Humanities for the Environment, or HfE, is an ambitious project that from 2013-2015 was funded by a generous grant from the Andrew W. Mellon Foundation. The project networked universities and researchers internationally through a system of 'observatories'. This book collects the work of contributors networked through the North American, Asia-Pacific, and Australia-Pacific observatories. Humanities for the Environment showcases how humanists are working to 'integrate knowledges' from diverse cultures and ontologies and pilot new 'constellations of practice' that are moving beyond traditional contemplative or reflective outcomes (the book, the essay) towards solutions to the greatest social and environmental challenges of our time. With the still controversial concept of the 'Anthropocene' as a starting point for a widening conversation, contributors range across geographies, ecosystems, climates and weather regimes; moving from icy, melting Arctic landscapes to the bleaching Australian Great Barrier Reef, and from an urban pedagogical 'laboratory' in Phoenix, Arizona to Vatican City in Rome. Chapters explore the ways in which humanists, in collaboration with communities and disciplines across academia, are responding to warming oceans, disappearing islands, collapsing fisheries, evaporating reservoirs of water, exploding bushfires, and spreading radioactive contamination. This interdisciplinary work will be of great interest to scholars in the humanities, social sciences, and sciences interested in interdisciplinary questions of environment and culture.

Catheter Ablation of Cardiac Arrhythmias David J. Wilber 2011-09-22

Radiofrequency Catheter Ablation of Cardiac Arrhythmias has been so extensively updated for its third edition that the book now features a new title: Catheter Ablation of Cardiac Arrhythmias: Basic Concepts and Clinical Applications. The editors bring you 21 polished chapters, each updating the fundamentals and progressing to advanced concepts, providing state-of-the-art knowledge with highly relevant material for experienced electrophysiologists as well as fellows in training. This streamlined new edition features: • Two new editors, both widely published and leaders in the field of catheter ablation • 21 instead of 39 chapters, achieved by focusing on primary topics of broad interest and assimilating information from a wide range of sources • Fewer authors, chosen for their recognized contributions to the topics under discussion, providing a more integrated and coherent approach • Anatomic insights from leading pathologist Siew Yen Ho, integrated with new information from imaging technologies Each chapter dealing with ablation of a specific arrhythmia features the author's personal approach to ablation of the arrhythmia, including practical "how-to" tips, and a review of potential pitfalls. Alternate approaches and variations are succinctly summarized. Original figures and drawings illustrate specific approaches to improve the usability of the book.

Developing a Road Map for Engaging Diasporas in Development Dovelyn

Rannveig Agunias 2012 State governments recognize the value diaspora populations bring to development efforts worldwide. Since 2007, the Global Forum on Migration and Development has examined ways to highlight policies and programs that can magnify the resources, both human and financial, that emigrants and their descendants contribute to development. This handbook continues that effort on the basis of earlier investigations by the book's collaborating institutions, the academic and policy literature, consultations and in-depth interviews with government officials and nongovernmental actors, and input by 62 national governments. The handbook is divided into three major parts. Each part gives concrete examples of policies and programs that have been

effective, and pulls out both useful lessons and common challenges associated with the topics at hand. The pivotal question now facing many policymakers is not so much if diasporas can benefit their countries of origin but how they do so and what kinds of government policies and programs can foster these relationships.

Natural Disasters Patrick L. Abbott 2002 This book focuses on how the normal processes of the Earth concentrate their energies and deal heavy blows to humans and their structures. It is concerned with how the natural world operates and, in so doing, kills and maims humans and destroys their works. Throughout the book, certain themes are maintained: energy sources underlying disasters; plate tectonics and climate change; Earth processes operating in rock, water, and atmosphere; the significance of geologic time; complexities of multiple variables operating simultaneously; The text aims to explain important principles about the Earth and then develop further understanding through numerous case histories. It includes recent happenings such as the Western United States wildfires and the Los Alamos prescribed burn, both occurring in the year 2000.

The SAGE Handbook of Human Geography, 2v Roger Lee 2014-05-22 Superb! How refreshing to see a Handbook that eschews convention and explores the richness and diversity of the geographical imagination in such stimulating and challenging ways. - Peter Dicken, University of Manchester "Stands out as an innovative and exciting contribution that exceeds the genre." - Sallie A. Marston, University of Arizona "Captures wonderfully the richness and complexity of the worlds that human beings inhabit... This is a stand-out among handbooks!" - Lily Kong, National University of Singapore "This wonderfully unconventional book demonstrates human geography's character and significance not by marching through traditional themes, but by presenting a set of geographical essays on basic ideas, practices, and concerns." - Alexander B. Murphy, University of Oregon "This SAGE Handbook stands out for its

capacity to provoke the reader to think anew about human geography ... essays that offer some profoundly original insights into what it means to engage geographically with the world." - Eric Sheppard, UCLA Published in association with the journal Progress in Human Geography, edited and written by the principal scholars in the discipline, this Handbook demonstrates the difference that thinking about the world geographically makes. Each section considers how human geography shapes the world, interrogates it, and intervenes in it. It includes a major retrospective and prospective introductory essay, with three substantive sections on: Imagining Human Geographies Practising Human Geographies Living Human Geographies The Handbook also has an innovative multimedia component of conversations about key issues in human geography - as well as an overview of human geography from the Editors. A key reference for any scholar interested in questions about what difference it makes to think spatially or geographically about the world, this Handbook is a rich and textured statement about the geographical imagination.
