Handbook of Research on Learner-Centered Approaches to Teaching in an Age of Transformational Change Bromer, Billi L.

2022-06-24 Institutions of education are in an age of transformational change in which learning has a wider scope of understanding and

long-term impact than ever before. Those involved in teaching and learning require additional training and subject matter support towards developing a broader and more profoundly complex understanding of the learners affected by evolving sociological events and associated needs. More than ever, a broader understanding of the learner is needed, inclusive of a learner-centered approach to both teaching and learner cognitive engagement. The Handbook of Research on Learner-Centered Approaches to Teaching in an Age of Transformational Change examines the abundant transformational changes that have occurred and provide strategies to understand and address them. It draws from a wide range of experts and provides a burgeoning understanding of the effects of these rapidly-moving

transformational changes that are occurring in the processes of teaching and learning. Exploring a wide range of issues such as community engagement scholarship, motivation-driven assignment design, and trauma-informed practices, this major reference work is an invaluable resource for educators of K-12 and higher education, educational faculty and administration, pre-service teachers, government officials, non-profit organizations, sociologists, libraries, researchers, and academicians.

100 Top Picks for Homeschool Curriculum Cathy Duffy 2005 A critical volume for the homeschooling community that helps parents make informed choices regarding learning styles and curriculum

Secondary Schools and Cooperative Learning Jon E. Pedersen 2014-03-18 Original essays by noted scholars explore cooperative learning, curriculum development, and teaching strategies. Focusing on grades 9 through 12, the volume first emphasizes

theories underlying the use of selected cooperative learning strategies in secondary schools and then examines strategies and practical applications for classrooms. Contributors include David Johnson, Roger Johnson, Ruven Lazarowitz, Yael Sharan, Shlomo Sharan, Robert Slavin, Karl Smith, and others who have successfully implemented cooperative learning strategies in science, math, social studies, English/language arts, and gifted and talented. These contributors focus on how models are utilized and implemented. Discussions involve obstacles that impede success, problems and concerns, solutions, and suggestions for problem solving. An index is provided.

Teaching Secondary and Middle School Mathematics

Daniel J. Brahier 2005
Teaching Secondary and Middle School Mathematics combines up-to-date technology and research with a vibrant writing style to help teachers grasp curriculum, teaching, and assessment issues as they relate to secondary and middle school mathematics. Designed for pre-service or in-service teachers, the second edition presents concise, current, and meaningful descriptions of what it takes to be an effective teacher of mathematics. This extensively revised, practical resource offers a balance of theory and practice, including a wealth of examples and descriptions of classroom situations to assist students in

visualizing mathematics instruction in the classroom. Each chapter contains specific outcomes for the reader, a glossary of relevant terms, several discussion questions and an extensive bibliography that contains references and suggested readings. Appendices include a descriptive list of recommended Internet Web sites on mathematics education and two case studies for further discussion. New To This Edition! A new chapter (Chapter 7) examines four major content areas of the secondary and middle school curriculum--algebra, geometry, data analysis and probability, and discrete mathematics--and the teaching methodology and NCTM Standards specific to each area. A new chapter (Chapter 10) devoted to the topic of equity discusses special needs students, gender equity, and ethnic/cultural differences. "How Would You React?" scenarios have been added in each chapter which allow students (and professors) to explore various teaching and

learning issues and ideas for making decisions in a debate setting. "Spotlight on Technology" and examples highlighting major chapter concepts involving the use of technology have been interspersed throughout and encourage students to think about the appropriate use of technology in teaching mathematics. Daniel Brahier is Associate Professor of Mathematics Education at Bowling Green State University in Ohio and a current eighth grade teacher. He is also the author of *Assessment in Middle and High School Mathematics: A Teacher's Guide* (Eye On Education, 2001). With experience as a teacher, administrator, guidance counselor, and curriculum coordinator, his teaching and writing draws from every angle.

Instructor's Annotated Edition features Instructor Notes, with teaching ideas, warnings about common student errors, and historical notes. Instructor Notes next to each Example refer teachers to a similar problem in the following exercise set for possible use as an additional in-class example. Suggested Activities (found in the margin) can be used in class to explore concepts, as alternative (discovery) strategies for teaching the concept, or as cooperative learning activities. Suggested Assignments before each exercise set save instructors class preparation time.

Leaf) Matthew Johll
2012-05-04 Matthew Johll's
Exploring Chemistry covers the standard topics for the nonmajors course in the typical order, but each chapter unfolds in the context of a single case study that helps students connect what they are learning to real-life situations. For example, students work through the often-difficult topics of molecular structure, gas laws, and organic chemistry by learning about the development of powerful new chemotherapy drugs, new technologies for screening airline passengers, and the creation of biodegradable biopolymers. It's the same case-driven approach that Johll uses in his acclaimed Investigating Chemistry (now in its Third Edition) but Exploring Chemistry goes beyond the other book's specific focus on examples from forensic science to use real-life stories from cooking, athletics, genetics, green chemistry, and more.
