Framing Questions, Constructing Answers Noel F. McGinn 1995 This workbook is an example of an interactive expert system. It simulates the relationship between an education policy maker and an informed consultant. The consultant interviews the policy maker, asking about the performance of the education system. The policy maker's answers to each question influence the next question that is asked. The consultant discusses results from studies in other countries to help focus questions. Eventually the questions lead to examples of programs tried out in countries with problems similar to those of the policy maker. All aspects of basic education systems are covered: finance, teachers, assessment, curriculum, material, buildings, and administration.

Teaching Secondary and Middle School Mathematics Daniel J. Brahier 2005 Teaching Secondary and Middle School Mathematics combines up-to-date technology and research with a vibrant writing style to help teachers grasp curriculum, teaching, and assessment issues as they relate to secondary and middle school mathematics. Designed for pre-service or in-service teachers, the second edition presents concise, current, and meaningful descriptions of what it takes to be an effective teacher of mathematics. This extensively revised, practical resource offers a balance of theory and practice, including a wealth of examples and descriptions of classroom situations to assist students in visualizing mathematics instruction in the classroom. Each chapter contains specific outcomes for the reader, a glossary of relevant terms, several discussion questions and an extensive bibliography that contains references and suggested readings. Appendices include a descriptive list of recommended Internet Web sites on mathematics education and two case studies for further discussion. New To This Edition! A new chapter (Chapter 7) examines four major content areas of the secondary and middle school curriculum--algebra, geometry, data analysis and probability, and discrete mathematics--and the teaching methodology and NCTM Standards specific to each area. A new chapter (Chapter 10) devoted to the topic of equity discusses special needs students, gender equity, and ethnic/cultural differences. "How Would You React?" scenarios have been added in each chapter which allow students (and professors) to explore various teaching and learning

issues and ideas for making decisions in a debate setting. "Spotlight on Technology" and examples highlighting major chapter concepts involving the use of technology have been interspersed throughout and encourage students to think about the appropriate use of technology in teaching mathematics. Daniel Brahier is Associate Professor of Mathematics Education at Bowling Green State University in Ohio and a current eighth grade teacher. He is also the author of Assessment in Middle and High School Mathematics: A Teacher's Guide (Eye On Education, 2001). With experience as a teacher, administrator, guidance counselor, and curriculum coordinator, his teaching and writing draws from every angle.

Teaching Mathematics for the 21st Century Linda Huetinck 2008 This third edition of Teaching Mathematics for the 21st Century continues to help teachers let the secret out-to open up to their students the wonderful discoveries and challenges of the pattern-making and problem-solving aspects of a fascinating subject: mathematics. The rationale remains the same-to enable prospective and current teachers to access and use tools and strategies to effectively teach mathematics to contemporary students. Changing demographics, knowledge of how people learn, and technology all impact the way we educate our young people. This edition incorporates lessons and strategies from programs that have proven success in many types of classrooms. Many of these examples help students connect mathematics to real life situations and communicate their understanding of the underlying concepts. Although technology is constantly being upgraded, ways to increase student motivation through its application remains a goal. For example--since applets can enhance a lesson whether the teacher uses a computer projector, a "smart" board, or has students work individually on computers--we have identified several sources of mathematics applets that can be correlated to various lessons. Research citations and summaries have been updated to reflect current information on teaching and learning. For future teachers.
