### **Local Web Development with Ddev**

**Explained** Michael Anello 2018-11-14 DDEV-Local is a revolutionary tool for local web development. It's much better than WAMP, MAMP and other tools you've used in the past. DDEV-Local is an open-source local development environment for PHP-based projects. It provides a robust and flexible local development setup for platforms such as Drupal, WordPress, and TYPO3. Key Features Up-to-Date: Constantly updated, the material in Local Web Development With DDEV Explained is always current. Clear instruction: You will follow plain English, clear visuals and enjoyable step-by-step instructions. What You'll Learn Mike teaches Drupal and professional web development. During those

classes, he teaches students how to set up and use a local development environment for their projects. Until last year, he based those lessons on an old-school, all-in-one AMP stack. However, those old stacks, such as WAMP and MAMP, are increasingly incompatible with modern web development techniques. Mike spent about a year looking for an alternative. During his search, one tool rose to the top: DDEV-Local. Mike fell in love with using this new tool. He updated his training classes to use DDEV-Local and hasn't looked back since. DDEV-Local uses Docker, a tool that allows developers to package up services in containers. The power behind Docker is that it provides a hardware-independent way of running containers, so that you can run any Docker container on any hardware that supports Docker. In a typical DDEV-Local scenario, there is a web server container, a database server container, and a database administration container. DDEV-Local provides you with reliable Docker containers and
