The Validity of Gains in Scores on the Kentucky Instructional Results Information System (KIRIS) Daniel M. Koretz 1998 In recent years, in an effort to avoid the degradation of instruction and inflation of test scores that often occurred when educators were held accountable for scores on multiple-choice tests, policymakers have experimented with accountability systems based on performance assessments. The Kentucky Instructional Results Information System (KIRIS), which rewarded or sanctioned schools largely on the basis of changes in scores on a complex, partially performance-based assessment, was an archetype of this wave of reform. It is not a given, however, that performance assessment can avoid the inflation of scores that arises when teachers and students focus too narrowly on the content of the assessment used for accountability rather than focusing on the broad domains of achievement the assessment is intended to measure. Accordingly, this study evaluated the extent to which the large performance gains shown

on KIRIS represented real improvements in student learning rather than inflation of scores. External evidence of validity--that is, comparisons to other test data--suggests that KIRIS gains were substantially inflated. Even though KIRIS was designed partially to reflect the frameworks of the National Assessment of Educational Progress (NAEP), large KIRIS gains in fourth-grade reading from 1992 to 1994 had no echo in NAEP scores. Large KIRIS gains in mathematics from 1992 to 1994 in the fourth and eighth grades did have some echo in NAEP scores, but Kentucky's NAEP gains were roughly one-fourth as large as the KIRIS gains and were typical of gains shown in other states. The large gains high-school students showed on KIRIS in mathematics and reading were not reflected in their scores on the American College Testing (ACT) college-admissions tests. KIRIS science gains were accompanied by ACT gains only one-fifth as large. Internal evidence of validity--that is, evidence based on patterns within the KIRIS data themselves--was more ambiguous but also provided some warning of likely inflation, particularly in mathematics. For example, schools that showed large gains on KIRIS also tended to show larger than average discrepancies in performance between new and reused test items, suggesting that teachers had coached students narrowly on the content of previous tests. The findings of this study indicate that inflation of scores remains a risk in assessment-based accountability systems even when they rely on test formats other than multiple choice. There is a clear need to evaluate the results and effects of assessment-based accountability systems, and better methods for evaluating the validity of gains need to be developed.

Building a Validity Argument for the Test of English as a Foreign Language Carol A. Chapelle 2008 The Test of English as a Foreign Language (tm) (TOEFL®) is used by more universities worldwide than any other test to assess English language proficiency for academic admission and placement decisions, and to guide English language instruction. This landmark volume provides a detailed description and analysis of Educational Testing Service's research and development efforts to develop a major revision of the TOEFL® test. The result is a book that serves as a case study of test design drawing upon theory in the complex domain of English language proficiency while attempting to meet standards of educational measurement. Building a Validity Argument for the Test of English as a Foreign Language(tm) is distinctive in its attempt to develop a coherent story of the rationale for a test or its revision, explain the research and development process, and provide the results of the validation process. Through its treatment of one test, it expands on and tests principles and approaches to educational measurement, providing an in-depth, integrated perspective

on the overall process of test revision. Moreover, because the conceptual foundation and history are presented alongside the empirical studies and validity argument, these sometimes disparate areas are presented in a way that demonstrates their connections - an approach which represents a departure from, or extension of, conventional materials on test revision. This volume is particularly relevant for professionals and graduate students in educational measurement, applied linguistics, and second language acquisition as well as anyone interested in assessment issues.

College Geometry with GeoGebra Barbara E. Reynolds 2021-02-01 From two authors who embrace technology in the classroom and value the role of collaborative learning comes College Geometry Using GeoGebra, a book that is ideal for geometry courses for both mathematics and math education majors. The book's discovery-based approach guides students to explore geometric worlds through computer-based activities, enabling students to make observations, develop conjectures, and write mathematical proofs. This unique

textbook helps students understand the underlying concepts of geometry while learning to use GeoGebra software—constructing various geometric figures and investigating their properties, relationships, and interactions. The text allows students to gradually build upon their knowledge as they move from fundamental concepts of circle and triangle geometry to more advanced topics such as isometries and matrices, symmetry in the plane, and hyperbolic and projective geometry. Emphasizing active collaborative learning, the text contains numerous fully-integrated computer lab activities that visualize difficult geometric concepts and facilitate both small-group and whole-class discussions. Each chapter begins with engaging activities that draw students into the subject matter, followed by detailed discussions that solidify the student conjectures made in the activities and exercises that test comprehension of the material. Written to support students and instructors in active-learning classrooms that incorporate computer technology, *College Geometry with GeoGebra* is an ideal resource for geometry courses for both mathematics and math education majors. *Journal for Research in Mathematics Education* 2013
