Forestry and Biodiversity Fred L. Bunnell
2010-01-01 Sustainable management is a problem for countries that depend on natural resources. Forests contain much of the world's biodiversity and offer significant renewable resources with a potentially small ecological and carbon footprint. Yet as global demand for forest products increases, conserving biodiversity has become more urgent and challenging. *Forestry and Biodiversity* makes the case for adaptive management - a structured approach to learning by doing - to sustain biodiversity in managed forests. It draws on the theory and principles of conservation biology and forest ecology and illustrates them, and the challenges they pose,

through a practical, real-world study of a 1.1 million hectare commercial operation in a coastal temperate rainforest.

Environmental Management: Adrian Belcham
2014-09-19 Written by Adrian Belcham, author of *Manual of Environmental Management*, this is the essential guide to prepare you for the IEMA Associate Membership Exam and NEBOSH Diploma in Environmental Management. Through the inclusion of revision tips, exam guidance and self-test questions, this guide will consolidate your understanding of environmental management and help you to prepare for your exam.
