This book provides a comprehensive reference to legal professional privilege in both contentious and non-contentious contexts, addressing legal advice and litigation privilege, as well as privilege against self-incrimination and without prejudice privilege. Providing detailed coverage of the nature of privilege, how it arises, how it is lost, and its limits, the book begins with an outline of the law and policy underlying privilege, before providing guidance on issues that arise regularly in practice. These issues include exceptions (with a detailed analysis of the iniquity exception), multi-jurisdictional issues, procedural matters, and challenges like pre-existing and partly privileged documents. Systematically updated to cover all significant developments in privilege law, this fourth edition considers the wealth of recent case law that has been published and includes new sections addressing the issues of privilege that arise in criminal proceedings and Britain's withdrawal from the European Union. Estimation of Elasticity of Intertemporal Substitution. Empirical Monetary Economics Julian Fischer 2020-12-09 Seminar paper from the year 2020 in the subject Business economics - Banking, Stock

Exchanges, Insurance, Accounting, grade: 1,0, University of Hannover (Institut für Geld und Internationale Finanzwirtschaft), course: Empirical Monetary Economics Using Microdata, language: English, abstract: In this thesis the predictive power of individual survey participants on expected macroeconomic values is analysed. The research results of Crump (2015) are investigated and the elasticity of intertemporal substitution (EIS) is estimated according to their model. The core estimate results in an EIS coefficient of 0.839, which is marginally higher than previous results in literature. Considering the predictive power, demographic variables, sensitivity components, and time dependent fixed effects, the range is approximately 0.6 to 0.9, depending on the specification, where the estimated EIS values range. In particular the subdivision in different levels of education allows interesting and validated implications. The interpretation of the EIS offers a helpful contribution for many market actors and especially economic policymakers. For example, the effectiveness and targeting accuracy of an economic stimulus plan in the current corona crisis could be increased with the help of the empirical findings of the EIS. Especially in times of crisis, such as the current corona pandemic, we are repeatedly reminded that in our economic world all market participants and institutions are deeply interconnected due to dependencies and expectations. Not only central banks, which in recent years have been accused of having a reduced capacity to act as a result of low interest rate policies, but also investors, entrepreneurs and governments are interested in gaining a deeper understanding of the impact of expectations on real value development.
