Encyclopedia of Evolutionary Biology 2016-04-14 *Encyclopedia of Evolutionary Biology, Four Volume Set* is the definitive go-to reference in the field of evolutionary biology. It provides a fully comprehensive review of the field in an easy to search structure. Under the collective leadership of fifteen distinguished section editors, it is comprised of articles written by leading experts in the field, providing a full review of the current status of each topic. The articles are up-to-date and fully illustrated with in-text references that allow readers to easily access primary literature. While all entries are authoritative and valuable to those with advanced understanding of evolutionary biology, they are also intended to be accessible to both advanced undergraduate and graduate students. Broad topics include the history of evolutionary biology, population genetics, quantitative genetics; speciation, life history evolution, evolution of sex and mating systems, evolutionary biogeography, evolutionary developmental biology, molecular and genome evolution, coevolution, phylogenetic methods, microbial evolution, diversification of plants and fungi, diversification of animals, and applied evolution. Presents fully comprehensive content, allowing easy access to fundamental information and links to primary research. Contains concise articles by leading experts in the field that ensures current coverage of each topic. Provides ancillary learning tools like tables, illustrations, and multimedia features to assist with the comprehension process.

Biochemistry Terry Brown 2016-09-22 *Biochemistry* is a major new textbook designed and created specifically for briefer courses in the subject. Written by Prof. Terry Brown of the University of Manchester (author of *Genomes and Gene Cloning*), the book provides the necessary detail and rigour expected for these courses, but without the extraneous

material found in the larger textbooks. With an increasing number of students taking a short course in biochemistry there is a growing need for a book that covers the subject concisely and succinctly. *Biochemistry* has been designed from the outset for these shorter courses; it is not a cut-down version of one of the larger books that dominate the market. Although it is shorter, there is no compromise in content, style and coverage. The book is attractively designed in full colour throughout with all the pedagogical features expected in a major textbook. It covers what students should be expected to know and is written in the clear and accurate writing style for which Terry Brown is widely lauded. With its competitive price and resources for adopting lecturers (all of the illustrations and diagrams from the book, and answers to the end of chapter questions), *Biochemistry* will become the textbook of choice for any brief biochemistry course. Confirmed Adoptions *Biochemistry* is already the required text at the following institutions: Becker College, USA Bishop Burton College, UK Bournemouth University, UK Charles R. Drew University of Medicine and Science, USA Charleston Southern University, USA Colorado State University - Pueblo, USA Idaho State University, USA Liverpool John Moores University, UK Montclair State University, USA Newcastle University, UK Rivier University, USA Southeast Missouri State University, USA Staffordshire University, UK Stephen F Austin State University, USA Texas Christian University, USA The University of Texas at Austin, USA Umeå University, Sweden University of Aberdeen, UK University of Bradford, UK University of Bedfordshire, UK University of Brighton, UK University of the Incarnate Word, USA University of Kansas, USA University of Miami Miller School of Medicine, USA University of Nottingham, UK University of Roehampton, UK University of Salford, UK University of the West of England, UK University of Tulsa, USA Valley City State University, USA Yale University School of Medicine, USA

Developing and Validating Test Items Thomas M. Haladyna 2013-07-18 Since test items are the building blocks of any test, learning how to develop and validate test items has always been critical to the teaching-learning process. As they grow in importance and use, testing programs increasingly supplement the use of selected-response (multiple-choice) items with constructed-response formats. This trend is expected to continue. As a result, a new item writing book is needed, one that provides comprehensive coverage of both types of items and of the validity theory underlying them. This book is an outgrowth of the author's previous book, *Developing and Validating Multiple-Choice Test Items*, 3e (Haladyna, 2004). That book achieved distinction as the leading source of guidance on creating and validating selected-response test items. Like its predecessor, the content of this new book is based on both an extensive review of the literature and on its author's long experience in the testing field. It is very timely in this era of burgeoning testing programs, especially when these items are delivered in a computer-based environment. Key features include ... Comprehensive and Flexible - No other book so thoroughly covers the field of test item development and its various applications. Focus on Validity - Validity, the most important consideration in testing, is stressed throughout and is based on the Standards for Educational and Psychological Testing, currently under revision by AERA, APA, and NCME Illustrative Examples - The book presents various selected and constructed response formats and uses many examples to illustrate correct and incorrect ways of writing items. Strategies for training item writers and developing large numbers of items using algorithms and other item-generating methods are also

presented. Based on Theory and Research - A comprehensive review and synthesis of existing research runs throughout the book and complements the expertise of its authors.

Generation and Interpretation of Morphogen Gradients James Briscoe 2010 Signalling by morphogens such as the Hedgehog family, Notch, Wingless/Wnt and various growth factors is essential during embryogenesis. The establishment of concentration gradients of these morphogens plays a key role during developmental patterning in all multicellular organisms, assuring that distinct cell/tissue types and organs appear at the right place in the right time during embryogenesis. Regulation of morphogen synthesis, trafficking and diffusion are all known to play a part in setting up these gradients, and a complex web of signaling mechanisms ensures that specific responses occur at the correct threshold concentration in the recipient cells whose fate depends on these morphogens.
