Research Methods for Criminal Justice and the Social Sciences Connie Ireland 2010 Research Methods for Criminal Justice and the Social Sciences combines a traditional research book with exercises that allow students to experience research in a controlled environment. It is a companion methods/manual for use with most traditional social scientific research textbooks. This book offers readers basic information about methodological concerns (brief readings); and a variety of practices exercises relating to those readings. Some features of this book: Each chapter begins with a BRIEF discussion of the elements relevant to a basic understanding of research methods After each section of each chapter are several abstracted reprints containing basic intros of published articles Each reading is then followed with an Application Exercise which relates to the methodological procedure in the abstracted reprint...all exercises were designed to be completed by college students and allows them to get their "hands dirty with the This is a perfect resource for individuals interested in the field of criminal justice, criminology, or sociology.

Conducting Research Lawrence T. Orcher 2016-10-14 • Prepares students to conduct their first empirical research study, with quantitative and qualitative methods covered in detail. Common features as well as differences between the two research approaches are explored. • While theoretical material is included, the emphasis is on providing practical, easy-to-follow advice on how to conduct a first research project. • Unlike most texts with hypothetical examples, this text—with real examples written by a variety of published researchers—makes research methods come alive. Students see how research methods are used to explore important, contemporary problems. • Factual Questions at the end of each chapter help students review key concepts covered in the chapters. • Questions for Discussion encourage students to consider specific techniques and strategies that they might use while conducting their research.

International Politics on the World Stage John T. Rourke 1993 This concise text provides students and instructors with a comprehensive overview of world politics, inviting them in a straightforward and accessible way to explore international relations and its new challenges. A hallmark of the text is the authors' position that politics affect the lives of all of us, and that the individual can have an impact, whether small or large, by being politically aware and by taking action..

Conducting Research Gül Seçkin 2025-02-24 Conducting Research prepares students to conduct their first empirical research study, with quantitative and qualitative methods covered in detail. The emphasis is on providing practical, easy-to-follow advice on how to conduct a first research project. This book walks students through each step of the research process, from selecting a research topic and participants to analysing data and presenting research findings. Notably, the third edition places a heightened emphasis on digital social science research methods, encompassing both quantitative and qualitative methodological approaches. The primary focus is on providing practical and easily comprehensible guidance for successfully executing an empirical project for a research methods and design course. The updated real research examples serve to exemplify the application of research principles in an empirical social science research context, further enhancing the students' preparedness for their research project. Furthermore, the inclusion of enhanced online resources for both students and instructors renders this an ideal text for

social sciences courses in multiple disciplines such as sociology, psychology, education, and healthcare. With online resources for students and instructors, this is the ideal text across the social sciences, such as sociology, psychology, healthcare and education. New to this edition: A new chapter on digital social science methods incorporating both quantitative and qualitative research methodologies A new chapter on research ethics to support the foundations of research knowledge All-new support materials available online for instructors and students

Spaces in Architecture Bert Bielefeld 2019-04-01 The design of a building is a complex process in which the architect develops spaces which are defined by a number of different parameters. The most important of these are space requirements, distances, furniture and fittings, and movement zones. From the dimensions of the human body it is possible to derive guide values for these reference sizes that make spaces comfortable to be in and to use. Spaces in Architecture is a useful reference work for students and designers for quickly looking up detailed information on space scenarios that occur in many different types of buildings. For example, the book lists all important dimensions for entrance areas, doors, staircases, ramps, and elevators. On the basis of this fundamental information it is possible to design buildings in terms of function and type.

Map Librarianship Susan Elizabeth Ward Aber 2016-11-04 Map Librarianship identifies basic geoliteracy concepts and enhances reference and instruction skills by providing details on finding, downloading, delivering, and assessing maps, remotely sensed imagery, and other geospatial resources and services, primarily from trusted government sources. By offering descriptions of traditional maps, geographic information systems (GIS), remote sensing, and other geospatial technologies, the book provides a timely and practical guide for the map and geospatial librarian to blend confidence in traditional library skill sets. - Includes rarely discussed concepts of citing and referencing maps and geospatial data, fair use and copyright - Creates an awareness and appreciation of existing print map collections, while building digital stewardship with surrogate map and aerial imagery collections - Provides an introduction to the theory and applications of GIS, remote sensing, participatory neogeography and neocartography practices, and other geospatial technologies - Includes a list of geospatial resources with descriptions and illustrations of commonly used map types and formats, online geospatial data sources, and an introduction to the most commonly used geospatial software packages available, on both desktop and mobile platforms
