Guide to Assembly Language Programming

in Linux Sivarama P. Dandamudi 2005-12-06
Processor designs can be broadly divided into CISC (Complex Instruction Set Computers) and RISC (Reduced Instruction Set Computers). The dominant processor in the PC market, Pentium, belongs to the CISC category, and Linux is fast becoming the number one threat to Microsoft's Windows in the server market. This unique guidebook provides comprehensive coverage of the key elements of Assembly language programming, specifically targeting professionals and students who would like to learn Assembly and intend or expect to move to

the Linux operating system. The book instructs users on how to install Linux on existing Windows machines. Readers are introduced to Linux and its commands, and will gain insights into the NASM assembler (installation and usage).

Assembly Language Programming for the VAX-11 Karen A. Lemone 1983 This is a two-part text about assembly language programming in the VAX/MACRO language. Unlike texts that are concerned solely with the assembly language itself, this addresses the design of assemblers, macroprocessors, and linkers. Part I focuses on the fundamentals of assembly language programming in the VAX/MACRO language. It is aimed at the beginning assembly language programmer, conforming with current ACM recommendations concerning these courses. Part II addresses the same subjects from a systems viewpoint, most especially assembler, macroprocessor, and linker design.
