will master the onboarding of diverse data sources from endpoint, network, cloud, and identity systems. This domain focuses on understanding the configuration of automation through threat intelligence feeds, content packs from the marketplace, messaging systems, and the orchestration of response workflows using playbooks, custom tasks, and debug processes. Content Optimization (24%): This domain teaches how to design and implement parsing and modeling rules for data normalization and enrichment. It covers building and fine-tuning detection rules, including correlation logic, IOC/BIOC detection, scoring models, and Attack Surface Management (ASM) configurations, alongside creating custom dashboards and incident alert layouts for actionable insights. Maintenance and Troubleshooting (24%): This section strengthens capabilities in managing exceptions and exclusions, updating XSIAM components (XDR agents,

collectors, Broker VMs), and resolving issues related to data ingestion, normalization, parsing, and automation workflows. It builds confidence in sustaining and troubleshooting the XSIAM platform post-deployment. This guide is an indispensable resource for XSIAM Engineers and SIEM Engineers deploying and managing Cortex XSIAM, cybersecurity professionals working in modern SOCs focused on automation, playbooks, and detection engineering, security engineers and architects managing threat feeds, log normalization, and security integration pipelines, and SOC analysts and operations leads responsible for incident detection and response.
