Principles of Biology: Animal Systems Nicoladie Tam
2016-06-28 "Principles of Biology: Animal Systems" is a part of the college-level Principles of Biology course series textbooks. It is a tutorial written in questions and answers format to describe the principles of anatomy and physiology in the biological systems, including evolution and the functions of each organ

system. This book contains chapters in biological principles, scientific methods, biological system, nervous system, sensory system, motor system, endocrine system, reproductive system, circulatory system, respiratory system, immune system, renal system, digestive system, and origin of species. It is a study guide with in-depth explanations. It is written in question-and-answer format so that it provides students with immediate feedback for every question they may ask on each of the topics. This also provides an interactive dialog with the students so that they are engaged in their learning. It also provides with further explanations of each answer so that students can understand the materials in details. It also provides the students with examples to illustrate the concepts. Each section is written in a modular-unit

format that is self-contained for easy reading. This allows the students to learn each topic incrementally without relying on re-reading the previous sections. This facilitates the learning style of both sequential-learners and analytical-learners to acquire the knowledge intuitively. The principles and concepts are introduced systematically so students can learn the concept and retain the materials analytically and logically without memorizing the trivial facts. This will help students build the foundation for more advanced level topics to be introduced subsequently.

Preparing to sit for the Praxis Biology: Content Knowledge (5236) exam? Whether you're a recent biology graduate entering the teaching profession, a career changer seeking secondary school certification, or an experienced

educator adding a new state certification, this is the most thorough and exam-aligned Praxis Biology study guide available for 2026 and 2027. The Praxis Biology (5236) Study Guide 2026–2027 by Marcus P. Foxworth covers all five major content domains tested on the ETS Praxis Biology exam — from scientific inquiry and biochemistry to genetics, evolution, plant and animal biology, and ecology — all 150 testable concepts covered in one expertly organized, exam-focused resource. Inside this comprehensive guide, you will find: Scientific methods, inquiry, and laboratory safety — the scientific method and hypothesis testing, experimental design, data collection and analysis, interpreting graphs and statistical data, laboratory safety protocols, laboratory equipment, engineering design process, applications of science and technology, and ethical considerations in scientific research Biochemistry: atoms, molecules, and chemical

principles — atomic structure and elements, chemical bonding, properties of water and pH, organic molecules including carbohydrates, lipids, proteins and nucleic acids, enzymes, reaction kinetics and energy, and chemical reactions in living systems Cell structure and function — cell theory, prokaryotic vs. eukaryotic cells, cell organelles and their functions, cell membrane structure and transport, passive transport including diffusion and osmosis, active transport and bulk transport, and cell communication and signaling Cellular processes: energy metabolism and cell division — ATP and cellular respiration including glycolysis, Krebs cycle and electron transport chain, anaerobic respiration and fermentation, photosynthesis including light-dependent and light-independent reactions, chemosynthesis, the cell cycle, mitosis and cytokinesis, and meiosis and sexual reproduction DNA, RNA, and protein synthesis — DNA structure and organization,

Biological Principles A Tutorial Study Guide

DNA replication, RNA structure and types, transcription, translation, gene expression and regulation, and mutations including types and effects Genetics: classical and molecular — Mendel's Laws of Inheritance, monohybrid and dihybrid crosses, Punnett squares and probability, dominant, recessive and codominant traits, incomplete dominance and multiple alleles, sex-linked traits, polygenic inheritance, chromosomal abnormalities and genetic disorders, biotechnology including PCR and gel electrophoresis, genetic engineering and CRISPR, and cloning Evolution and population genetics — Darwin's theory of evolution by natural selection, evidence for evolution, types of natural selection, adaptation and fitness, Hardy-Weinberg equilibrium, mechanisms of evolution including genetic drift, gene flow and mutation, speciation and reproductive isolation, and phylogenetic trees and cladograms Classification and diversity of

life — taxonomy and binomial nomenclature, the three domains and six kingdoms, phylogenetic classification, viruses, bacteria and archaea, protists, and fungi Plant biology: structure, function, and reproduction — plant tissue and organ types, vascular vs. non-vascular plants, water and nutrient transport, transpiration and stomata, phototropism and plant responses, alternation of generations, flower structure and pollination, fertilization and seed development, and plant hormones including auxins, gibberellins, cytokinins, ethylene and ABA Animal biology: systems, behavior, and reproduction — animal tissue types, cell differentiation and specialization, major animal organ systems, and homeostasis and feedback mechanisms 5 full-length practice tests with 750+ questions and detailed answer explanations covering all five Praxis Biology content domains and every major testable concept Structured 6-week and 12-week study plans, exam
