Repairing the Nets: Nova Scotia Alternative Provincial Budget 2005-06 Canadian Centre for Policy Alternatives 2005 The reversal in the last budget of the income tax cuts has been crucial to improving the provincial financial performance. [...] The level of debt relative to the size of the economy continues to decrease. [...] Adam Smith, the father of modern economics (and incorrectly lauded as an opponent of government) had this to say about taxes: "The subjects of every state ought to contribute toward the support of the government, as nearly as possible, in proportion to their respective abilities; that is in proportion to the revenue which they respectively enjoy under the protection of the state. [...] The crucial indicator is the ability of the province to carry the provincial debt. [...] The level of debt relative to the size of the economy (debt to GDP) is the best indicator of a government's capacity to manage its debt load.

Sustainable Automobile Transport L. Ryan 2008-01-01 Transport, and in particular road transport, represents a significant global threat to long-term sustainable development, and is one of the fastest-growing consumers of final energy and sources of greenhouse gas emissions. In this book, long-term energy economy environment scenarios are used to identify the key technological developments required to address the challenges passenger car transport poses to climate change mitigation and energy security. It also considers possible targets for policy support and examines some of the elements that contribute to the significant levels of uncertainty particularly social and political conditions. The book then builds on this long-term scenario analysis with a broad review of recent empirical examples of relevant policy implementation to identify near-term options for the passenger transportation sector, which may promote a shift towards a more sustainable transport system over the longer term. Sustainable Automobile Transport will be of particular interest to those in the policy process who are striving to address the automobile-derived challenges associated with climate change a growing rather than declining problem. It will have a worldwide audience as every developed and rapidly growing society struggles to address the dynamic growth in greenhouse gas emissions from automobiles.
