Centromeres and Kinetochores Ben E. Black 2017-08-23 This book presents the latest advances concerning the regulation of chromosome segregation during cell division by means of centromeres and kinetochores. The authors cover both state-of-the-art techniques and a range of species and model systems, shedding new light on the molecular mechanisms controlling the transmission of genetic material between cell divisions and from parent to offspring. The chapters cover five major areas related to the current study of centromeres and kinetochores: 1) their genetic and epigenetic features, 2) key breakthroughs at the molecular, proteomic, imaging and biochemical level, 3) the constitutive centromere proteins, 4) the role of centromere proteins in the physical process of chromosome segregation and its careful orchestration through elaborate regulation, and 5) intersections with reproductive biology, human health and disease, as well as chromosome evolution. The book offers an informative and provocative guide for newcomers as well as those already acquainted with the field.

Chromatin Signaling and Diseases Olivier Binda 2016-08-06

Chromatin Signaling and Diseases covers the molecular mechanisms that regulate gene expression, which govern everything from embryonic development, growth, and human pathologies associated with aging, such as cancer. This book helps researchers learn about or keep up with the quickly expanding field of chromatin signaling. After reading this book, clinicians will be more capable of explaining the mechanisms of gene expression regulation to their patients to reassure them about new drug developments that target chromatin signaling mechanisms. For example, several epigenetic drugs that act on chromatin signaling factors are in clinical trials or even approved for usage in cancer treatments, Alzheimer's, and Huntington's diseases. Other epigenetic drugs are in development to regulate various class of chromatin signaling factors. To keep up with this changing landscape, clinicians and doctors will need to stay familiar with genetic advances that translate to clinical practice, such as chromatin signaling. Although sequencing of the human genome was completed over a decade ago and its structure investigated for nearly half a century, molecular mechanisms that regulate gene expression remain largely misunderstood. An emerging concept called chromatin signaling proposes that small protein domains recognize chemical modifications on the genome scaffolding histone proteins, facilitating the nucleation of enzymatic complexes at specific loci that then open up or shut down the access to genetic information, thereby regulating gene expression. The addition and removal of chemical modifications on histones, as well as the proteins that specifically

recognize these, is reviewed in Chromatin Signaling and Diseases. Finally, the impact of gene expression defects associated with malfunctioning chromatin signaling is also explored. - Explains molecular mechanisms that regulate gene expression, which governs everything from embryonic development, growth, and human pathologies associated with aging - Educates clinicians and researchers about chromatin signaling, a molecular mechanism that is changing our understanding of human pathology - Explores the addition and removal of chemical modifications on histones, the proteins that specifically recognize these, and the impact of gene expression defects associated with malfunctioning chromatin signaling - Helps researchers learn about the quickly expanding field of chromatin signaling

Emerging Functions of Septins - Volume II Manoj B. Menon 2022-07-12

Raynaud's Phenomenon Fredrick M. Wigley 2024-05-02 This book comprehensively reviews the understanding of a disorder that continues to challenge primary care clinicians and specialists. Raynaud's phenomenon is an inappropriate and exaggerated response of the digital and cutaneous circulation to cold environmental temperatures. It is common, often causing significant morbidity and it is a major challenge for physicians at every level and specialty. A comprehensive review of

Raynaud's is now timely because of the incredible progress in understanding the molecular mechanisms of the normal regulation of cutaneous blood flow and how disease can disrupt the function of these specialized vessels. Likewise, the clinical implications of Raynaud's phenomenon are better appreciated with studies defining its prevalence, the associated diseases, and new treatment approaches for patients suffering from it. The nomenclature used to classify cases has changed over the years and is important to understand these terms both for clinical care and research. This fully updated second edition comprehensively discusses various causes of Raynaud's phenomenon including childhood Raynaud's phenomenon, Raynaud's phenomenon secondary to connective tissue disease, occupational causes, and a variety of other associated disorders. Careful consideration is given to the diagnosis of Raynaud's phenomenon with state of the art discussion of nailfold capillary examination, non-invasive imaging, angiography, and appropriate serological testing. The concept that Raynaud's phenomenon is associated with systemic disease or can be the manifestation of a systemic vasospastic disorder is also presented. In addition to reviewing both non-drug and drug therapy for patients with Raynaud's phenomenon, this volume provides a practical approach in specific clinical situations by presenting problematic cases and the authors' expert opinions on therapy. It also discusses mechanisms contributing to the vascular dysfunction of primary Raynaud's phenomenon and the vascular disease of secondary Raynaud's phenomenon. Engaging readers with case vignettes and a plethora of visual aids, Raynaud's Phenomenon: From Pathogenesis to Management is a state-of-the-art, authoritative reference and invaluable contribution to the literature that will be of interest to adult and pediatric physicians, rheumatologists, and clinical and basic researchers.

Buttress's World Guide to Abbreviations of Organizations L. Pitman 1996-12-31 The previous edition of this directory extended its coverage of the Far East, Australasia and Latin America, areas previously under-represented. For this new edition emphasis has been given to increasing the number of entries for organizations from Britain, the United States and Australia, and particular attention has been paid to new political organizations in Central and Eastern Europe and the former Soviet Union. The number of entries included has gone up to over 68,000 of which over 9,000 are new or amended. Cross-references from defunct organizations in the previous edition have been deleted, and references (indicated by ex and now) added for organizations which have changed their name since the previous edition. As before, the range of organizations included is broad and only purely local organizations have been excluded. This directory therefore lists official and unofficial organizations, national and international, on all Subjects: political, economic and social. Acronyms of parent bodies of subsidiary organizations are given where appropriate and equivalencies are used to link acronyms in different languages for the same organization. Further information about the organizations listed can be found in the sources listed in the bibliography. I would like to thank Henry Heaney and Graeme Mackintosh for their advice, and David Grinyer for his technical support. L. M. Pitman Bibliography Adams, R. (ed.) Recent Advances in the Molecular Genetics of Glioma Pawel Buczkowicz 2024-09-30 Gliomas are central nervous tumours with a glial cell of origin, such as neural stem cells, astrocytes and oligodendrocytes. They usually occur in the brain (supratentorial, infratentorial, brainstem) but occasionally originate in the spine. Gliomas may be benign or malignant, comprise of various histopathological subtypes and WHO grades (I-IV). Despite having a low incidence rate of around 3.19 per 100,000 (in the US) and a median age of 64 years for a first diagnosis, gliomas account for 80% of malignant brain tumours, and are most often fatal; they are the leading cause of cancer-related death among males from the ages of 0-39 and in females aged 0-19.
