Cool Companies Joseph J. Romm 2014-04-08 'Cool Companies' turns on its head the idea that measures to avert global warming and climate change will pile massive costs on to the industrial sector. It shows how the smartest companies have been able to make money through the improvements that reduce their greenhouse gas emissions. Industry is going to have to adjust to the new tax and regulatory regimes being introduced around the world, aimed at reducing emissions and meeting internationally agreed targets. The more far-sighted companies have recognised the opportunities this offers. Joseph Romm shows how successful they have been in taking them. Romm profiles more than 50 companies, and describes their experiences in the context of their corporate strategies. All are leaders in their sectors and many are household names such as Xerox, Toyota, BP (now BP Amoco), DuPont, Compaq and 3M. They grasped early on the strategic importance of cutting emissions. By working to do so, through increased efficiency, new technologies and improved processes, they have cut their energy costs and boosted their productivity, often dramatically - improvements which

translate straight down to the bottom line. The message is clear. Cool Companies - those prepared to overhaul their policies and innovate - are much more likely to thrive in the new climate for business, while those which have to be dragged backwards into the future will face higher costs and tougher competition.

Intellectual Property Rights And The Life Science Industries: Past, Present And Future (2nd Edition) Graham Dutfield 2009-05-05 This book is a highly readable and entertaining account of the co-evolution of the patent system and the life science industries since the mid-19th century. The pharmaceutical industries have their origins in advances in synthetic chemistry and in natural products research. Both approaches to drug discovery and business have shaped patent law, as have the lobbying activities of the firms involved and their supporters in the legal profession. In turn, patent law has impacted on the life science industries. Compared to the first edition, which told this story for the first time, the present edition focuses more on specific businesses, products and technologies, including Bayer, Pfizer, GlaxoSmithKline, aspirin, penicillin, monoclonal antibodies and polymerase chain reaction. Another difference is that this second edition also looks into the future, addressing new areas such as systems biology, stem cell research, and synthetic biology, which promises to enable scientists to "invent" life forms from scratch.

Economic Lessons from the Transition Daniel R. Kazmer 2004 This text focuses on major transitions in the 1990s: the transition from central planning and communism to market capitalism and the global integration of national financial systems.

Practical Financial Management William Lasher 2006 The first Canadian edition of Practical Financial Management is the latest milestone in a journey in education shared by the authors. They believe that most finance texts are harder for students to understand than they should be. The issue is relatively unique to this field. Practical Financial Management is unique because of its approach to teaching finance; that approach is the result of a combination of classroom and practical experience. The book is easy to read, enjoyable, and non-intimidating. In other words, the text is accessible and the reviewers have been unanimous in their praise of the work's conversational style and readability.

Materials and Sustainability Julia L Freer Goldstein 2024-04-12 This book examines sustainable manufacturing, from the extraction of materials to processing, use, and disposal, and argues that significant changes in all of the above are needed for the world to progress toward a more circular economy. Materials and processing methods are usually chosen with performance as the key metric. Why has our society embraced plastics? Because they work. In most cases, they are lighter, easier to manufacture, and less expensive than the metal, wood, glass, or stone they have replaced. Why do industrial manufacturers use toxic chemicals? Because they are effective, but the unintended consequences may be severe. By learning how various materials are made and what happens when they are recycled, readers will better understand the value of materials and the challenges that manufacturers face when trying to make their facilities and products less toxic and less wasteful. The three chapters in Part I provide essential background about materials in the circular economy, chemicals, and waste. Part II delves into specific materials. It includes chapters on plastics, metals, wood and paper products, glass, and novel materials. Part III covers recycling and

manufacturing processes, and Part IV delves into practical considerations, including the effect of regulations, concluding with a chapter that helps readers translate the information presented into action. Interviews with industry experts round out the chapters and offer valuable insights. *Materials and Sustainability* is a must-read for business professionals who are serious about making their companies as environmentally responsible as possible and for business and engineering students who want to begin their careers with practical knowledge about materials and their impacts.

Economics, Business, and Islamic Finance in ASEAN Economics

Community Ordoñez de Pablos, Patricia 2020-01-03 The economic integration of Southeast Asia or ASEAN Economic Community (AEC) offers enormous opportunities for its members to develop and collectively collaborate with other economies. Combining the culture of the region with global business in an expanding digital atmosphere, however, has caused numerous challenges on an international scale. While highlighting topics such as global business, smart manufacturing, and human resource management, this publication explores sustainable development practices as well as the methods of cultural appreciation in economics. This book is ideally designed for deans, heads of department, directors, politicians, policymakers, economists, corporate heads, senior general managers, managing directors, information technology directors and managers, libraries, academicians, researchers, and students.
