Problem-Solving Approach to Aquatic Chemistry

Enables civil and environmental engineers to understand the theory and application of aquatic equilibrium chemistry. The second edition of *A Problem-Solving Approach to Aquatic Chemistry* provides a detailed introduction to aquatic equilibrium chemistry, calculation methods for systems at equilibrium, applications of aquatic chemistry, and chemical kinetics. The text directly addresses two required ABET program outcomes in environmental engineering: "... chemistry (including stoichiometry, equilibrium, and kinetics)" and "material and energy balances, fate and transport of substances in and between air, water, and soil phases." The book is very student-centered, with each chapter beginning with an introduction and ending with a summary that reviews the chapter's main points. To aid in reader comprehension, important terms are defined in context and key ideas are summarized. Many thought-provoking discussion questions, worked examples, and end of chapter problems are also included. Each part of the text begins with a case study, a portion of which is addressed in each subsequent chapter, illustrating the principles of that chapter. In addition, each chapter has an Historical Note exploring connections with the people and cultures connected to topics in the text. *A Problem-Solving Approach to Aquatic Chemistry* includes: Fundamental concepts, such as concentration units, thermodynamic basis of equilibrium, and manipulating equilibria. Solutions of chemical equilibrium problems, including setting up the problems and algebraic, graphical, and computer solution techniques. Acid-base equilibria, including the concepts of acids and bases, titrations, and alkalinity and acidity. Complexation, including metals, ligands,

equilibrium calculations with complexes, and applications of complexation chemistry. Oxidation-reduction equilibria, including equilibrium calculations, graphical approaches, and applications. Gas-liquid and solid-liquid equilibrium, with expanded coverage of the effects of global climate change. Other topics, including chemical kinetics of aquatic systems, surface chemistry, and integrative case studies. For advanced/senior undergraduates and first-year graduate students in environmental engineering courses, *A Problem-Solving Approach to Aquatic Chemistry* serves as an invaluable learning resource on the topic, with a variety of helpful learning elements included throughout to ensure information retention and the ability to apply covered concepts in practical settings.

Chemistry: The Molecular Nature of Matter, International Adaptation continues to emphasize the importance of applying concepts to problem-solving to achieve high-level learning and increase retention of chemistry knowledge. The inclusion of more, and updated, real-world examples provide students with a significant relationship of their experiences with the

science of chemistry. Additionally, end-of-chapter review questions integrating scientific practices, cross-cutting concepts, and chemistry core ideas to relate the ideas presented in each chapter to the wider fields of science have been updated to align them with career concepts relevant to the environment, engineering, biological, pharmaceutical, and medical sciences. Problems have been arranged in a confidence-building order.

CHEMISTRY SILBERBERG 2003

Chemistry Martin Stuart Silberberg 1996 This general chemistry text centres on the theme that observable change in chemical systems is the result of molecular change. The aims of this edition are to enable students to perceive matter and change at the molecular level and to help build student confidence in their ability to solve chemical problems as they discover the relevance of chemistry to their lives.

THEORY and PROBLEMS of COLLEGE CHEMISTRY 1966

Physical Chemistry of Foods Pieter Walstra 2002-10-08 Exploring the structure and physical and chemical properties of solutions, dispersions, soft solids, fats, and cellular systems, Physical Chemistry of Foods describes the physicochemical principles of the reactions and conversions that occur during the manufacture, handling, and storage of foods. Coverage progresses from aspects of thermodynamics, bonds and interaction forces, and reaction kinetics, to transport phenomena, polymers, colloidal interactions, nucleation, glass transitions and freezing, and soft solids. This comprehensive volume effectively clarifies

the physicochemical processes encountered in food product development.
