The Cambridge History of Ireland: Volume

3, 1730-1880 James Kelly 2018-04-26
The eighteenth and nineteenth centuries was an era of continuity as well as change. Though properly portrayed as the era of 'Protestant Ascendancy' it embraces two phases - the eighteenth century when that ascendancy was at its peak; and the nineteenth century when the Protestant elite sustained a determined rear-guard defence in the face of the emergence of modern Catholic nationalism. Employing a chronology that is not bound by traditional datelines, this volume moves beyond the familiar political narrative to engage with the economy, society, population, emigration, religion, language, state formation, culture, art and architecture, and the Irish abroad. It provides new and original interpretations of a critical phase in the emergence of a modern Ireland that, while focused firmly on the island and its traditions, moves beyond the nationalist narrative of the twentieth century to provide a history of late early modern Ireland for the twenty-first

Highest Stage Of The Development Of Capitalism In The United States And Its Effects On The American Family, Volume III, Book I, 1960 To 1980 Lionel D. Lyles 2024-03-03 For 10,000 years before any European immigrants arrived on the North American Continent, Native American Indians engaged in a communal lifestyle. From 1600 to 1791, American Colonists established a thriving home production economy, and having ownership of their tools, or means of production, they produced everything they needed to survive. They were self-reliant, and the American Colonists sold their excess goods to merchants, who resold them for a profit. By 1791, the merchants were able to start the first textile factories as a result, which brought an abrupt end to the home production economy, and the beginning of American Capitalism. Former independent colonists were now forced into the textile factory, and the first wage contract appeared in America. The wage

contract also set in motion a contradiction between the capitalist owners of the means of production and the new American Working Class. The wage contract allowed the owners of working class labor, and the instruments of production, to evolve into an American Ruling Class, and the producers of all commodities and wealth became the American Working Class People wage-workers class. Because of their divergent interests, the two classes formed a class contradiction, and the latter became known as the capitalist American Ruling Class Opposite and the American Working Class Opposite (People) wage-workers. This development occurred mainly in the northern factory economy, while in the South, uncompensated African Slave Labor was dominant, which was owned by an American Slaveholding Class. By 1860, the contradiction between the capitalist American Ruling Class Opposite owner of the wage labor system came into a head-on contradiction with

uncompensated African Slave Labor, and a bloody Civil War was fought to determine which type of means of production would prevail and dominate during the 20th Century? The South was defeated, and the wage contract system became nationalized. Therefore, throughout the twentieth Century, including the beginning of the new Millennium, the capitalist American Ruling Class Opposite expropriated the labor's product of the American Working Class Opposite (People) wage-workers, which resulted in this class accumulation of multiple-billions of dollars of Surplus-Value, and simultaneously this loss translated into the American Working Class Opposite (People) wage-workers' increasing alienation, estrangement, loss self-identity, self-expression, and freedom.

Industiarlization before Industiarlization

Peter Kriedte 1982-01-28 Beginning in the late Middle Ages, and accelerating in the sixteenth and seventeenth centuries, there developed in many rural regions of Europe a domestic industry, mass-producing craft goods for distant markets. This book presents an analysis of this 'industrialization before industrialization', and considers the question whether it constituted a distinct mode of production, different from the preceding feudal economy and from subsequent industrial capitalism, or was part of a process of continuous evolution characterized by the spread of wage labour and the penetration of capitalism into the process of production. It is a full-scale attempt to take a look at the place of proto-industrialization in the genesis of capitalism, and will interest economic and social historians, as well as anthropologists, sociologists, and others concerned with the

development of capitalism.

The Science of Society (RLE Social Theory)

Stephen Frederick Cotgrove 2020-07-26 Two main criteria have guided the selection and presentation of the material for this text-book. Firstly, there is the claim that sociology is a science. Throughout, the emphasis has been on presenting sociological perspectives rather than conveying a mass of factual information. Science is essentially analytical. And sociology, if it is to justify its claim to be a science, must be more than simply 'political arithmetic', counting heads and providing demographic data for governments. Secondly, science, like other intellectual activities, can be exciting. The emphasis throughout is on the sociological study of industrial society, with particular reference to modern England. After an introductory discussion of sociological perspectives, there are chapters on each of the major sub-systems of society; the family, the educational system, the economy, the political system and belief systems.

The book ends with three chapters on major social processes: social differentiation and stratification, organization, and finally, social change, including a discussion of deviancy and disorganization.
