A Curriculum Guide for Teaching Crayfish Adapted from ESS Crayfish Johanna Strange 1979 The purpose of this study is to restructure an Elementary Science Study teacher's guide on the topic of crayfish that will have an instructional format similar to that used in the Science Curriculum Improvement Study guides. The guide is written for intermediate grade level instruction in science and is designed to correlate with Part I of SCIS Ecosystems. Included in the project is a statement of the problem, a review of the literature, definition of terms, methodology, correlation plan for implementation with SCIS Ecosystems, concepts to be developed, behavioral and process objectives, background information for maintenance of crayfish, and seven structured

lessons. Each lesson is designed to develop and reinforce the process skills designated by the Science Curriculum Improvement Study curriculum guides. Each of the lessons contains a section on stated objectives, teacher preparation, materials needed, background information, teaching suggestions, and clean-up procedures. Most lessons have student record sheets for recording student observations, predictions, and data collected on experiments.

Classroom Assessment Steven R. Banks 2012-04-13 Building on the success of the popular first edition, the author tackles the latest issues and practices in the field of classroom assessment. The No Child Left Behind Act has transformed the role of educational assessment, requiring annual assessments as part of a federal system of educational accountability. National accreditation organizations such as NCATE have mandated standards-based performance and emphasized specific assessment benchmarks in meeting these standards. The inclusion movement to accommodate special-needs students in the regular education classroom also has impacted classroom assessment practices. Teacher assessment, classroom environment, test anxiety, the Race to the Top grants, and many more timely topics receive comprehensive yet accessible treatment. Banks provides thorough and well-documented discussions of performance assessment, essay and multiple-choice assessments, formative assessment, and reliability/validity issues as well as invaluable classroom assessment tools that include portfolios, rubrics, journals, and models such as Anderson and Krathwohl's revision of Blooms Taxonomy. Gender and diversity issues, including learning differences and socioeconomic influences on student achievement, are given in-depth coverage. Outstanding features include case studies,

point/counterpoint debates on controversial assessment topics and practices, teacher application exercises, thought-provoking self-assessment exercises, and end-of-chapter activities that include review questions and opportunities for directed learning.
