Survivor-Centred Justice Ingrid Roestenburg-Morgan
2025-02-04 This volume interrogates global perspectives and issues that constitute and characterize survivor-centred justice, exploring both conceptual and theoretical issues surrounding the definition of a 'survivor', practical considerations of what constitutes a survivor-

centred approach to justice and available avenues of justice for survivors of mass atrocities. In the first part of the book, survivor-centred justice is explored at the level of the International Criminal Court (ICC). The second part evaluates developments taking place at the local and domestic levels where traditional, customary or local justice mechanisms find affinity with survivors in their quest for justice. The third part focuses on advocacy-based approaches being utilized specifically by non-governmental organizations (NGOs), multilateral and regional institutions such as the United Nations and African Union, in support of survivors. In the final part of the book future prospects for survivors in the promotion of peacebuilding and atrocity prevention are discussed. The discussions in this volume will be of particular value and

importance to international and transitional justice scholars, including legal and development practitioners interested in survivor-centred approaches to mass atrocity crimes Most importantly it aims to be of value to survivors, survivor communities and survivor-centred networks.

Proceedings of 5th

International Conference in Software Engineering for Defence Applications Paolo

Ciancarini 2018-01-02 This book presents high-quality original contributions on new software engineering models, approaches, methods, and tools and their evaluation in the context of defence and security applications. In addition, important business and economic aspects are discussed, with a particular focus on cost/benefit analysis, new business models, organizational evolution, and business intelligence systems. The contents are based on presentations delivered at SEDA 2016, the 5th International Conference in Software Engineering for

Defence Applications, which was held in Rome, Italy, in May 2016. This conference series represents a targeted response to the growing need for research that reports and debates the practical implications of software engineering within the defence environment and also for software performance evaluation in real settings through controlled experiments as well as case and field studies. The book will appeal to all with an interest in modeling, managing, and implementing defence-related software development products and processes in a structured and supportable way.

new edition of the third volume of a Treatise on International Criminal Law offers a comprehensive analysis of the procedures and implementation of international law by international criminal tribunals and the International Criminal Court. Through analysis of the framework of international criminal procedure, this volume considers each stage in the process of proceedings before the ICC, including the role of legal participants, the scope of jurisdiction, and the enforcement of sentences. This new edition has been expanded to include updated case law and relevant scholarly literature. Among others, it contains new (sub)sections on non-judicial investigative mechanisms, special forms of digital evidence, the 'submission approach' to material and information, trial management, and political elements within the 'interests of justice'. The full three-volume treatise addresses the entirety of international criminal law, re-stating and re-

examining the fundamental principles upon which it rests, the manner it is enacted, and the key issues that are shaping its future. It is essential reading for practitioners, scholars, and students of international criminal law alike.

[Polymer Nanocomposites for Advanced Engineering and Military Applications](#) Ramdani, Nouredine 2019-04-01

The field of polymer

nanocomposites has become essential for engineering and military industries over the last few decades as it applies to computing, sensors, biomedical microelectronics, hard coating, and many other domains. Due to their outstanding

mechanical and thermal features, polymer

nanocomposite materials have recently been developed and now have a wide range of applications. Polymer

Nanocomposites for Advanced Engineering and Military

Applications provides emerging research on recent advances in the fabrication methods, properties, and applications of various nano-fillers including surface-modification methods and chemical functionalization. Featuring coverage on a broad range of topics such as barrier properties, biomedical microelectronics, and matrix processing, this book is ideally designed for engineers, industrialists, chemists, government officials, military professionals, practitioners, academicians, researchers, and students.

Research Anthology on Military and Defense Applications, Utilization, Education, and Ethics Management

Association, Information Resources 2021-05-28 Military technology is highly advanced in terms of technology being used in the field, computer applications, artificial intelligence, and software applications. These high-performance technologies range from weapons to communications technology to automation in vehicles and

weaponry. These technologies must be both secure and reliable in harsh environments. Research is being focused specifically on that, including how military and defense applications operate, what modern technologies are being used, and the ethics surrounding these applications. A holistic view of these applications is necessary for both understanding current military tactics and tools along with the future applications. The Research Anthology on Military and Defense Applications, Utilization, Education, and Ethics focuses specifically on military and defense operations, expenditure, technologies, and tools, and the ethics surrounding technologies like weaponry and artificial intelligence in the military. The chapters cover a wide and diverse range of military and defense applications while providing crucial information on the functions, security, and reliability of these technologies. Beyond an understanding of the

applications themselves, this book also focuses on military education surrounding these technologies and the ethics of usage to provide a well-rounded understanding of research in the field. This book is ideal for military consultants, military personnel, defense agencies, national security agencies, government officials, defense personnel, policymakers, military educators and trainers, stakeholders, practitioners, researchers, academicians, and students interested in the latest research in military and defense applications.

Synergies Between Knowledge Engineering and Software

Engineering Grzegorz J. Nalepa 2017-09-15 This book compiles a number of contributions originating from the KESE (Knowledge Engineering and Software Engineering) workshop series from 2005 to 2015. The idea behind the series was the realignment of the knowledge engineering

discipline and its strong relation to software engineering, as well as to the classical aspects of artificial intelligence research. The book introduces symbiotic work combining these disciplines, such as aspect-oriented and agile engineering, using anti-patterns, and system refinement. Furthermore, it presents successful applications from different areas that were created by combining techniques from both areas.
