Purpose. This chapter provides a general history of the development of military diving operations. 1-1.2 Scope. This chapter outlines the hard work and dedication of a number of individuals who were pioneers in the development of diving technology. As with any endeavor, it is important to build on the discoveries of our predecessors and not repeat mistakes of the past. 1-1.3 Role of the U.S. Navy. The U.S. Navy is a leader in the development of modern diving and underwater operations. The general requirements of national defense and the

specific requirements of underwater reconnaissance, demolition, ordnance disposal, construction, ship maintenance, search, rescue and salvage operations repeatedly give impetus to training and development. Navy diving is no longer limited to tactical combat operations, wartime salvage, and submarine sinkings. Fleet diving has become increasingly important and diversified since World War II. A major part of the diving mission is inspecting and repairing naval vessels to minimize downtime and the need for dry-docking. Other aspects of fleet diving include recovering practice and research torpedoes, installing and repairing underwater electronic arrays, underwater construction, and locating and recovering downed aircraft.

Commercial Diver Training Manual, 6th Edition Hal

Lomax 2016-08-01 Updates in the 6th Edition -

Comprehensive rewrite can be used as stand-alone reference - Extensive index - Easy-to-read formatting - Color

photos/tables/figures added - Colorful book cover

ABOUT THE BOOK The 6th Edition of the Commercial Diver Training

Manual represents an almost total rewrite. Where previous

editions were designed to be utilized in conjunction either

with the NOAA Diving Manual or the U.S. Navy Diving

Manual, the 6th Edition has been written as a stand-alone

work that covers history, physics, physiology, diving

medicine, and first aid in addition to those chapters

devoted to diving technique, diving equipment, and working

underwater. This manual is presented with the

understanding that fully qualified instructors

experienced in underwater

work will provide any further explanation required by the reader. At the same time, the intent was to provide a manual to enhance both the theoretical and the practical training of the diver, with a view to providing graduates that are more knowledgeable and well informed in their chosen trade, performing their assigned tasks in a safe and productive manner. To that end, this manual strives to present the following: - Diving physics in a clear, concise manner - The latest theory and procedure in physiology and diving medicine - The latest in practice and procedure both inland and offshore - The most commonly used diving and support equipment accepted for use in today's industry While it is understood it would require several volumes to address every conceivable task performed on every type of underwater project employing commercial divers, this manual endeavors to cover the most commonly performed tasks and the most common underwater operations. By presenting these

more common projects and tasks in detail, it is hoped the reader will be better informed and better prepared for a career underwater. In addition, by further illustrating both technique and safety concerns with case studies and personal accounts from the author's career, the manual shows the reader these are more than just words being presented: suggestions help the reader become more proficient and safety guidelines keep the reader from injury or death.

U. S. Navy Diving Manual 1999-09 Presents comprehensive information on air diving operations. It contains data and information from all groups within the Navy diving community, and reflects state-of-the-art diving capabilities of the U.S. Navy. New equipments appearing for the first time include the Underwater Breathing Apparatus (UBA) MK 20 MOD 0, UBA MK 21 MOD 1, the Light Weight Diving System (LWDS) MK 3 MOD 0, and the Transportable Recompression Chamber System (TRCS).

Appendices: changes in the deployment of standby divers in ships husbandry diving, changes in treatment tables and new correction factors and guidance relating to the use of pneumofathometers.

Technical Manual TM 3-34.84 Swift Water Diving Operations March 2015

United States Government Us Army 2017-02-13 Technical Manual TM 3-34.84 Swift Water Diving Operations March 2015 Supervisors and divers must be thoroughly familiar with the risks associated with swift/fast water diving operations. Train-ups, rehearsals, and unit standard operating procedures should be used when planning and conducting diving operations in currents above 1 knot (1.85 kilometers per hour) (scuba) and 2.5 knots (4.63 kilometers per hour) (SSD). For the purposes of this manual, swift water is defined as sustained current from 1 to 4 knots (1.85 to 7.41 kilometers per hour). Fast water is defined as sustained current in excess of 4 knots (7.41 kilometers per

hour). The distinction is important as many of the safety steps for swift water DO NOT translate into safe practices for fast water. Swift/fast water divers must know how to move in the water to lessen the chances of being trapped, or pulled off the project and thrown down stream. Careful consideration needs to be taken in regard to the divers' overall fitness level, underwater hazards, lost diver procedures, and the increased risk of arterial gas embolism should the diver experience an uncontrolled ascent. Topside personnel must understand the forces acting on the diver, the tenders, and the support craft, as well as the potential for waterborne hazards to interfere with anchors, lines, and emergency recovery procedures. Supervisors must take into account additional risks associated with this type of operation. Leaders must plan for greater manning requirements, shorter bottom times, and increased fatigue of dive side personnel. This publication is developed as a

supplement to AR 611-75, FM 3-05.212/MCRP 3-11.3A, SS521-AG-PRO-010 0910-LP-106-0957, and TM 3-34.83. TM 3-34.84 provides recommended planning steps and procedures for conducting swift/fast water diving operations, to include the various techniques and equipment that will aid the dive team in mission accomplishment. This publication is not all inclusive. Leaders must assess each diving operation independently and conduct proper risk management to ensure personnel safety. TM 3-34.84 covers basic risks associated with swift/fast water diving, planning procedures, recommended equipment, and procedures. The diving supervisor on-site will need to adjust based on the mission, enemy, terrain and weather, troops and support available, time available, and civil considerations. This TM is designed to provide training information, strategies, program development, and training support materials for

swift/fast water diving operations. Leaders will receive relevant information to assist the development of individual training programs. Everything from supervisor/diver selection to diver tactics, techniques, and procedures are covered in the pages that follow. Applying strategies and planning considerations from this TM, United States Navy Diving Manual, and TM 3-34.83 will improve the dive team's performance when conducting operations in high current areas.
