BUILDING A SPORTSCAR EXTERIOR TO CLASS-A SURFACING STANDARDS TUTORIAL Serdar Hakan

DÜZGÖREN PREFACE
INTRODUCTION TO 'CLASS A SURFACING' 'Class A surfacing' is to produce mathematical surfaces to the most exacting standard. Once

completed the 'A Class surface' is the final output of styling design. These surfaces are the 'Master' for making the tools that produces the product itself. 'Class A' surfacing is one of the most complex and tedious 3D computer modeling tasks you can do. 'Class A' surface development occurs in the final phase of a project, when constraints are much tighter to adhere to. Modeling under these conditions is very hard without adoption of certain 'surface basics' rules. 3D computer modeling is still based on the knowledge and skill set of the individual user. Therefore productivity and surface quality is user dependent. The surfacing task can begin from the scan of a physical model, as in this tutorial, but it can also start from 2D sketch or verbal input. In most cases it is the continuation of a concept 3D digital model. Most of the time you will also need to be aware of and include flanges, draft angles, tool split lines and other engineering constraints. In the tutorial these are not

included. To include them would put even more constraints on the modeling/surfacing itself. This tutorial demonstrates only one small part of 'class A' surfacing, but a very important element of creating good quality surfaces. When you are starting a project or a part, always take some time to think how you will build this before you start. It is not a good idea to rush in the beginning of a project. To be successful and to achieve that right quality in the time given you need a 'strategy'. Without this you can find yourself in a corner from which you can never escape a dead end. These points below are, in my opinion, the most important, basic rules to succeed. □□ It is very important to have a strategy on methodology, surface layout and surface construction. □□ Always try to build the surfaces to allow easy modification. □□ Keep the surfaces as simple as possible. □□ Always try to build to an intersection. By following these basic rules you have come a long way to succeeding

in your modeling. Good luck.

systems. They are vibrant centers of cultural life and engines that drive the global economy. Contemporary cities are environmentally, socially, and economically unsustainable. The quality of urban life is threatened by such factors as pollution, rising temperatures, limited resources, congestion, social inequalities, aging of large sectors of the world population, poverty, informality, crime, and economic imbalances. The overall planning of future cities is a challenge that can only be faced by interdisciplinary teams combining multitudes of backgrounds and expertise.
