CSIR NET Life Sciences Question Bank Mocktime Publication This targeted question bank for the CSIR NET in Life Sciences is designed to cover the entire syllabus for both general aptitude (Part A) and subject-specific MCQs (Parts B & C). It includes downloadable PDFs of previous year papers, topic-wise question sets, annotated answer keys, and full-length mock tests. Candidate interviews emphasise that solving past papers deeply helps reveal the important themes and recurring question styles in Life Sciences. Suitable books linked to this bank also include comprehensive notes on cell biology, molecular biology, genetics, physiology, ecology and evolution, aligned to the NET syllabus. The exam pattern remains the same as overall CSIR NET structure: 150 total

questions, individual sections with defined numbers to attempt. The question bank helps build time-management, accuracy in MCQs and analytical application in Part C (4 marks each). Over time, students can track performance via sectional tests and previous paper trends. Given the highly competitive nature of NET, using this question bank consistently can help aspirants strengthen weak areas, simulate exam conditions, and gain confidence ahead of the actual exam.

Phylogenetic Systematics of Dart-poison Frogs and Their Relatives (Amphibia:Anura:Dendrobatidae) Taran Grant 2006

The known diversity of dart-poison frog species has grown from 70 in the 1960s to 247 at present, with no sign that the discovery of new species will wane in the foreseeable future. Although this growth in knowledge of the diversity of this group has been accompanied by detailed investigations of many aspects of the biology of dendrobatids, their phylogenetic relationships remain poorly understood. This study was designed to test hypotheses of dendrobatid diversification by combining new and prior genotypic and phenotypic evidence in a total evidence analysis. DNA sequences were sampled for five mitochondrial and six nuclear loci (approximately 6,100 base pairs [bp]; \bar{x} [arithmetic mean] = 53,740 bp per terminal; total dataset composed of approximately 1.55 million bp), and 174 phenotypic characters were scored from adult and larval morphology, alkaloid profiles, and behavior. These data were combined with relevant published DNA sequences. Ingroup sampling targeted several previously unsampled species, including *Aromobates nocturnus*, which was hypothesized previously to be the sister of all other dendrobatids. Undescribed and problematic species were sampled from multiple localities when possible. The final dataset consisted of 414

terminals: 367 ingroup terminals of 156 species and 47 outgroup terminals of 46 species. Direct optimization parsimony analysis of the equally weighted evidence resulted in 25,872 optimal trees. Forty nodes collapse in the strict consensus, with all conflict restricted to conspecific terminals. Dendrobatids were recovered as monophyletic, and their sister group consisted of Crossodactylus, Hylodes, and Megaelosia, recognized herein as Hylodidae. Among outgroup taxa, Centrolenidae was found to be the sister group of all atesphatanurans except Hylidae, Leptodactylidae was polyphyletic, Thoropa was nested within Cycloramphidae, and Ceratophryinae was paraphyletic with respect to Telmatobiinae. Among dendrobatids, the monophyly and content of Mannophryne and Phyllobates were corroborated. Aromobates nocturnus and Colostethus saltuensis were found to be nested within Nephelobates, and Minyobates was paraphyletic and nested within Dendrobates. Colostethus was shown to be rampantly nonmonophyletic, with most species falling into two unrelated cis- and trans-Andean clades. A morphologically and behaviorally diverse clade of median lingual process-possessing species was discovered. In light of these findings and the growth in knowledge of the diversity of this large clade over the past 40 years, we propose a new, monophyletic taxonomy for dendrobatids, recognizing the inclusive clade as a superfamily (Dendrobatoidea) composed of two families (one of which is new), six subfamilies (three new), and 16 genera (four new). Although poisonous frogs did not form a monophyletic group, the three poisonous lineages are all confined to the revised family Dendrobatidae, in keeping with the traditional application of this name. We also propose changes to achieve a monophyletic higher-level taxonomy for the atesphatanuran outgroup taxa. Analysis of character evolution revealed multiple origins of phytotelm-breeding, parental provisioning of nutritive oocytes for larval consumption (larval oophagy), and endotrophy. Available evidence indicates that transport of tadpoles on the dorsum of parent nurse frogs--a dendrobatid synapomorphy--is carried out primitively by male nurse frogs, with three independent origins of female transport and five independent origins of biparental transport. Reproductive amplexus is optimally explained as

having been lost in the most recent common ancestor of Dendrobatoidea, with cephalic amplexus arising independently three times.

Biology Cecie Starr 2006 Accompanying CD-ROM covers topics in the same order as the text, with a quiz and flashcards for each chapter, as well as hundreds of animations, interactive sequences, and movies, and a link to the publisher's biology website.

Problems and Solutions in Biological Sequence Analysis Mark Borodovsky 2006-09-04 This book is the first of its kind to provide a large collection of bioinformatics problems with accompanying solutions. Notably, the problem set includes all of the problems offered in *Biological Sequence Analysis*, by Durbin et al. (Cambridge, 1998), widely adopted as a required text for bioinformatics courses at leading universities worldwide. Although many of the problems included in *Biological Sequence Analysis* as exercises for its readers have been repeatedly used for homework and tests, no detailed solutions for the problems were available. Bioinformatics instructors had therefore frequently expressed a need for fully worked solutions and a larger set of problems for use on courses. This book provides just that: following the same structure as *Biological Sequence Analysis* and significantly extending the set of workable problems, it will facilitate a better understanding of the contents of the chapters in BSA and will help its readers develop problem-solving skills that are vitally important for conducting successful research in the growing field of bioinformatics. All of the material has been class-tested by the authors at Georgia Tech, where the first ever MSc degree program in Bioinformatics was held.
