**Biology** Garland Allen  
2001-05-03 "A brief and engaging tour of how life scientists form hypotheses, design experiments, analyze data, and draw conclusions in carrying out good science. Drawing on experiments from classic and modern biology, the authors compose a masterful picture of biology as a dynamic field ripe for a new generation of investigators."--pub. desc.  
*Law, Medicine and Ethics*  
Patricia A. King 2006 This reader is a spin-off publication from Law, Science and Medicine, Third Edition. It offers an interdisciplinary perspective on ethical and moral questions raised by medicine and introduces undergraduates to the manner in which law and policy shape society's views on birth, death, human experimentation, reproduction, use of genetic information, and beyond.

Psychology Saul M. Kassin  
2004 Psychology allows readers to discover the important findings of this field first-hand! Readers put themselves in the role of researcher, allowing them to take an active interest in understanding psychology as a psychologist would. Dozens of pioneering researchers have been interviewed, enabling

readers to find out how they became interested in psychology, how they came up with their important discoveries, how their discoveries influence the field today, and where they believe psychology is headed in the future. Topics include behavioral neuroscience, sensation and perception, consciousness, learning, memory, thought and language, nature and nurture, human development, intelligence, motivation, emotion, social influences, social and cultural groups, personality, psychological disorders, treatment, health and well-being. An exciting read for anyone interested in psychology and research; because of its comprehensive appendix, glossary, and reference section, this book is a must-have desk reference for psychologists and others in the field.

**Science, Worldviews and Education** Michael Matthews  
2009-07-14 This book has its origins in a special issue of the journal *Science & Education*

(Volume 18 Numbers 6-7, 2009). The essay by Costas Skordoulis - 'Science and Worldviews in the Marxist Tradition' - did not appear in that special issue due to a mistake in production scheduling. It was published in an earlier issue of the journal (Volume 17 Number 6, 2008), but has been included in this book version of the special issue. As explained in the Introduction, the catalyst for the journal special issue was the essay on 'Science, Worldviews and Education' submitted to the journal by Hugh G. Gauch Jr. This was circulated to the other contributors who were asked to write their own contribution in the light of the arguments and literature contained in the paper. Hugh made brief 'Responses and Clarifications' after the papers were written. However the Tanis Edis article on Islam and my own article on Priestley were processed too late to benefit from Hugh's appraisal. The journal is associated with the *International History*,

Philosophy, and Science Teaching Group which was formed in 1987. The group stages biennial international conferences and occasional regional conferences (details can be found at [www.ihpst.org](http://www.ihpst.org)). The group, through the journal, conferences, and its electronic newsletter (at [www.ihpst.org](http://www.ihpst.org)).

**Genetics** Arthur P. Mange 1990

**Research Ethics** Deborah R. Barnbaum 2001 For undergraduate/graduate-level Research Ethics courses in natural or social sciences. Based on the important premise that ethical research is better research, this text explores the ethical complexities of research in order to enhance researchers' existing capacities for ethical reflection and decision making. This comprehensive introduction to ethical research questions examines all aspects of the research process from the choice of research questions to publication of results and the role of the scientist in the community.

Resources for Teaching Middle School Science Smithsonian Institution 1998-04-30 With age-appropriate, inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them.

Resources for Teaching Middle School Science, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands-on, inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the

new guide are grouped in five chapters by scientific area—Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type—core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly

relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed—and the only guide of its kind—*Resources for Teaching Middle School Science* will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.
