Proceedings of the Twenty-third AAI Conference on Artificial Intelligence and the Twentieth Innovative Applications of Artificial Intelligence Conference 2008

Elementary Mathematical Methods Diane Thiessen 1989 This book contains 15 chapters: (1) "Teaching Problem Solving"; (2) "Using Calculators and Computers in Elementary School Mathematics"; (3) "Organizing for Instruction"; (4) "Teaching Numeration of Whole Numbers"; (5) "Teaching Numeration of Common and Decimal Fractions"; (6) "Teaching Addition and Subtraction of Whole Numbers"; (7) "Teaching Multiplication and Division of Whole Numbers"; (8) "Teaching Addition and Subtraction of Common and Decimal Fractions"; (9) "Teaching Multiplication and Division of Common and Decimal Fractions"; (10) "Teaching Measurement"; (11) "Teaching Geometry"; (12) "Teaching Rates, Ratios, Proportions, and Percents"; (13) "Teaching Statistics and Probability"; (14) "Teaching Integers and Their Operations"; and (15) "Teaching Number Patterns and Theory." The two appendices include discussions on "Calculators and Computers" and "Mainstreaming--Can Individual Needs be Met"? The chapters in this book reflect the strands taught in the elementary school mathematics curriculum. Throughout each chapter are collections of problem sets that divide the chapter into sections. A number of these problems are similar to lessons that could be used with elementary school children. (PK)

Polynomial and Matrix Computations Dario Bini 2012-12-06 Our Subjects and Objectives. This book is about algebraic and symbolic computation and numerical computing (with matrices and polynomials). It greatly extends the study of these topics presented in the celebrated books of the seventies, [AHU] and [BM] (these topics have been under-represented in [CLR], which is a highly successful extension and updating of [AHU] otherwise). Compared to [AHU] and [BM] our volume adds extensive material on parallel computations with general matrices and polynomials, on the bit-complexity of arithmetic computations (including some recent techniques of data compression and the study of numerical approximation properties of polynomial and matrix algorithms), and on computations with Toeplitz matrices and other dense structured matrices. The latter subject should attract people working in numerous areas of application (in particular, coding, signal processing, control, algebraic computing and partial differential equations). The authors' teaching experience at the Graduate Center of the City University of New York and at the University of Pisa suggests that the book may serve as a text for advanced graduate students in mathematics and computer science who have some knowledge of algorithm design and wish to enter the exciting area of algebraic and numerical computing. The potential readership may also include algorithm and software designers and researchers specializing in the design and analysis of algorithms, computational complexity, algebraic and symbolic computing, and numerical computation.

Optimization of Polynomials in Non-Commuting Variables Sabine Burgdorf 2016-06-07 This book presents recent results on positivity and optimization of polynomials in non-commuting variables. Researchers in non-commutative algebraic geometry, control theory, system engineering, optimization, quantum physics and information science will find the unified notation and mixture of algebraic geometry and mathematical programming useful. Theoretical results are matched with algorithmic considerations; several examples and information on how to use NCSOStools open source package to obtain the results provided. Results are presented on detecting the eigenvalue and trace positivity of polynomials in non-commuting variables using Newton chip method and Newton cyclic chip method, relaxations for constrained and unconstrained optimization problems, semidefinite programming formulations of the relaxations and finite convergence of the hierarchies of these relaxations, and the practical efficiency of algorithms.

Advances In Computing Techniques: Algorithms, Databases And Parallel Processing H Imai 1996-01-11 This proceedings collects papers in the areas of computer algorithms, databases and parallel processing. The papers were presented by very prominent computer scientists from Japan and Singapore invited to a three days JSPS-NUS seminar held in Singapore on Dec '94.

Fast 2D Solution-state NMR Jean-Nicolas Dumez 2023-05-17 Written by active investigators in the field, this book describes state-of-the-art methods that can accelerate the acquisition of 2D NMR spectra in solution-state NMR. The acquisition of fast multi-dimensional NMR data has motivated numerous ground-breaking developments in NMR pulse sequences and associated data processing methods. These in turn have revolutionized the way 2D NMR acquisitions are performed, at the same time broadening the scope of applications of 2D NMR. The first part of

the book provides an in-depth description of the concepts and implementation of major fast 2D NMR methods. The second part follows with illustrations of how such methods can be used in applications that require the acquisition of fast 2D NMR spectra, from reaction monitoring to hyperpolarization, including applications to a broad variety of samples and experimental conditions. Appealing to readers from both the methodology and applications communities, this title will fill a gap in the market for a book focused on small molecule NMR, and researchers from both academia and industry will find a rich plethora of knowledge.

Advances in Linear Matrix Inequality Methods in Control Laurent El Ghaoui 2000-01-01 Linear matrix inequalities (LMIs) have recently emerged as useful tools for solving a number of control problems. This book provides an up-to-date account of the LMI method and covers topics such as recent LMI algorithms, analysis and synthesis issues, nonconvex problems, and applications. It also emphasizes applications of the method to areas other than control.
