& Physiology for the Manual
Therapies 1e is designed to
meet the specific needs of
students preparing for careers
in the manual therapies, such
as massage therapy and
careers as physical therapy
assistants. This book provides
the most appropriate depth of
coverage for each body system
-- in both narrative and visuals
-- and by including relevant
applications linking the content
to situations they will face in
their careers.

The picture on the front cover of this book depicts a young man pulling a fishnet, a task of practical relevance for many centuries. It is a complex task, involving load transmission throughout the body, intricate balance, and eye head-hand coordination. The quest toward understanding how we perform such tasks with skill and grace, often in the presence of unpredictable perturbations, has a long history. However, despite a history of magnificent sculptures and drawings of the human body which vividly depict muscle activity and interaction, until more recent times our state of knowledge of human movement was rather primitive. During the past century this has changed; we now have developed a considerable database regarding the composition and basic properties of muscle and nerve tissue and the basic causal relations between neural function and

biomechanical movement. Over the last few decades we have also seen an increased appreciation of the importance of musculoskeletal biomechanics: the neuromotor system must control movement within a world governed by mechanical laws. We have now collected quantitative data for a wealth of human movements. Our capacity to understand the data we collect has been enhanced by our continually evolving modeling capabilities and by the availability of computational power. What have we learned? This book is designed to help synthesize our current knowledge regarding the role of muscles in human movement. The study of human movement is not a mature discipline.
