ELLs: Thinking Skills and CCSS, Focus on the Six Shifts Estee Lopez 2013-01-01 The Common Core State Standards (CCSS) for English Language Arts (ELA) require students to engage higher level thinking skills and language use to activate their understanding of content/text. They are designed to be academically rigorous for all students, and are

especially so for students who are English language learners (ELL). In *ELLs: Thinking Skills and CCSS*, Dr. Estee Lopez provides evidence-based instructional approaches as well as best practices for helping ELLs meet the CCSS for ELA. The six-page (tri-fold) guide is structured around the six shifts embodied in the CCSS for English Language Arts: 1. Increasing reading of informational text/balancing informational and literary texts 2. Knowledge in the disciplines 3. Staircase of complexity 4. Text-based answers 5. Writing from sources 6. Academic language The guide explains each shift, its implications for ELLs, and what is required of teachers. For each shift, the author lists best practices, examples of scaffolding for ELLs, and things that teachers and

administrators must do create conditions that ensure that ELLs succeed.

The Teaching and Assessing of Mathematical Problem Solving Randall I. Charles 2026-01-16 Originally published in 1988, this volume is the product of one of four NCTM Research Agenda Project conferences held during 1987. The topics of teaching and evaluating problem solving are high interest topics for teachers, teacher educators, curriculum developers, and administrators. Since 1980, many educators as a result of in-service programs, changes in curriculum guidelines, and changes in textbooks, had come to accept the important role problem solving can play in the curriculum and were interested in ways of improving their instructional programs. Research related to problem solving over the previous ten years had focused almost exclusively on analyses and characterizations of problem-solving competence and performance. Very little research had been conducted on issues more closely concerned with teaching and

assessing problem solving. The major purposes of this monograph were to bring to the attention of researchers the need for coordinated and collaborative research efforts related to teaching and assessing problem solving and to hopefully influence the beliefs, methodologies, and perspectives that would be used in conceptualizing this research. The papers here served as a start in building a research agenda for the teaching and assessment of mathematical problem solving. The hope was that the ideas presented here would lead to abundant research activities with results that ultimately influenced practice in the schools. Today it can be read in its historical context.

Volcanologists Robin Koontz 2019-03-27

Volcanoes have been feared, admired, and even worshipped by some cultures. Many times their eruptions have been unexpected and often deadly. Volcanologists specialize in different areas that are related to volcanoes. By gathering data and studying actual volcanic eruptions, they

map the deposits that make up the volcano and collect samples to analyze. By dating and identifying the volcanic samples, they learn about a volcano's history. It's a hot job, but someone has to do it! This title will allow students to make observations and/or measurements of an object's motion to provide evidence that a pattern can be used to predict future motion. • Text based questions • Content sidebars • Diagrams • Bold keywords with phonetic glossary
