Financial Management for Health-System Pharmacists Andrew L. Wilson

2008-09-30 In an era of skyrocketing drug costs, changing reimbursement, pharmacist and technician shortages, and a seemingly permanent "do-more-for-less" era of hospital and health-system management, every management decision that a pharmacy manager makes has financial implications. Success as a manager means understanding - and then mastering - the basics of finance and accounting as practiced in institutional healthcare. *Financial Management for Health-System Pharmacists* provides pharmacy managers with a set of fundamental financial management tools as they relate not only to pharmacy department management, but to the management of the hospital and healthcare system. Chapters include information on: * Financial accounting principles * Hospital financial management * Budgeting principles * Forecasting pharmaceutical expenditures * Cost management basics * Controlling operating results

Financial Accounting : As per the latest curriculum on the

directives of NEP 2020 M C Shukla, S C Gupta & T S Grewal This textbook has been primarily designed to meet the needs of B.Com. First Semester students under the recommended National Education Policy

Computerized Financial Systems Randall Dyck 2014-10-18 This book gives technical people an idea of how to design functional financial systems within computer database systems. The material is based on the author's 20 years of applying it in industry, on his doctoral studies of computer science, and on his lecture notes for business and computer courses that have accumulated over the last decade. It covers basic financial concepts and then gives ideas on how accounting information can be recorded and processed in databases. It discusses general ledgers, receivables, payables, inventory, and fixed asset systems, as well as others. All file structures are explained, along with sample data, diagrams for the structures, and suggestions for other changes that can be done to accommodate multi-company and multi-currency situations. An earlier book, "Life as a Professor", highlighted the challenges that are encountered in teaching current business and technology methods in colleges and universities, along with recommendations for solutions that are needed now in classrooms. A later book, "E-Commerce Concepts", discussed strategies to use when a

business wanted to take advantage of e-commerce to increase their sales and international exposure. Another book, "MBA Strategic Analysis", discussed methods to use to assess business strengths so that opportunities for growth can be more effectively implemented.

Artificial Financial Intelligence in China Dawei Zhao 2021-10-27

This book starts from the application scenarios of artificial financial intelligence regulation, commercial banking, wealth management and payments, etc., and makes a detailed study of the main scenarios of the application of China's artificial intelligence in the financial field, and also analysis specific application cases of China. With the popularization of smart phones and the rapid development of e-commerce, mobile payment, big data and other technologies are in the ascendant in China in recent years. In particular, artificial intelligence technologies in the form of facial, speech and semantic recognition are showing preliminary advantages in the field of FinTech, and the future era of Intelligent Finance has quietly come. The Chinese government has clearly put forward "China should rely on a robust cycle of domestic demand and innovation as the main driver of the economy while maintaining foreign markets and investors as a second engine of growth", science and technology innovation is the basic motivation of economic and social cycle, to implement the "dual circulation strategy", it is necessary to understand the key role of scientific and technological innovation in financial innovation services, and improve financial services must be driven by science and technology. There is a natural relationship between artificial intelligence and financial services, because financial services are credit and information intermediaries, and data is the most critical for finance, while artificial intelligence has a super ability in dealing with complex data. At present, many Chinese Banks have applied artificial intelligence to their daily operations and management, such as accurate customer identification, enhanced process tracking, intelligent marketing, and product process transformation, so as to simplify financial service processes and shorten service cycles. In General, this book both pays attention to practical application and theoretical, which is a useful reference book in theoretical research and practical work, and also helps readers to understand the application of intelligent finance in China.
